Marc Records import and export manual

Marc export

1. Use Access Reports to export Marc ID field into an Excel file.
2. Use Excel 2007 to open that file and save it into csv (MS-DOS) format.

3. Copy the csv file you created into d:/voyager/kilgoredb/local/<filename>
4. Open KornShell prompt and go into d:/voyager/kilgoredb/sbin
5. Run Pmarcexport
   `Pmarcexport -rB –mM –t d:/voyager/kilgoredb/local/<filename>`
6. Go to d:/voyager/kilgoredb/rpt, locate the marc.exp.yyyymmdd.hhmm file and move it into your computer.
7. Modify it as your wish

Marc Injection

1. After modification of Marc file, transfer it into mrc format and copy it into d:/voyager/kilgoredb/local/<filename>
2. Go to d:/voyager/kilgoredb/sbin
3. Run Pbulkimport
   "Pbulkimport –i NET3 –f d:/ voyager/kilgoredb/local/ <filename>"
4. Go to d:/voyager/kilgoredb/rpt, and check the running log. Backup (copy) that log in local computer folder.
5. Check whether the injection is successful or not.

Pay Attention

1. Marc export method, we use here, only export bibliographic record, not any of MFHD record.
2. Warning: the marc injection method, we employed here, is merely restricted to export records from Voyager database, modify it, and inject back into Voyager database.
3. Marc Injection, we use here, only compares the BIB_ID from incoming record and the one in voyager database.
