Automated Testing
Posted by Dave Reid on February 15, 2005 at 12:06am
The Pathauto module automatically generates URL/path aliases for various kinds of content (nodes, taxonomy terms, users) without requiring the user to manually specify the path alias. This allows you to have URL aliases like /category/my-node-title instead of

Posted by Dave Reid on February 15, 2005 at 12:06am
The Pathauto module automatically generates URL/path aliases for various kinds of content (nodes, taxonomy terms, users) without requiring the user to manually specify the path alias. This allows you to have URL aliases like /category/my-node-title instead of /node/123. The aliases are based upon a "pattern" system that uses tokens which the administrator can change.

Generated 3 URL aliases.
Bulk generation will only generate URL aliases for items that currently have no aliases. This is typically used when installing Pathauto on a site that has existing un-aliased content that needs to be aliased in bulk.
Select the types of un-aliased paths for which to generate URL aliases
Content
Taxonomy term
Update

All the alias are updated with article/ page/ event/ group. Pathauto and token modules allow you to setup url patterns. You can delete aliases and bulk generate at any times. The advantage is that after you create this, every new article and page creation will use the pattern you created.
