Page: Style options
Grouping field Nr.1
– None –
You may optionally specify a field by which to group the records. Leave blank to not group.
Number of columns *
3
Change it from 4 to 3.
Automatic width
The width of each column will be calculated automatically based on the number of columns provided. If additional classes are entered or a theme injects classes based on a grid system, disabling this option may prove beneficial.
Alignment
Horizontal
Vertical
Horizontal alignment will place items starting in the upper left and moving right. Vertical alignment will place items starting in the upper left and moving down.
Default column classes
Add the default views column classes like views-col, col-1 and clearfix to the output. You can use this to quickly reduce the amount of markup the view provides by default, at the cost of making it more difficult to apply CSS.
Custom column class

<Administration>
The maximum depth for a link and all its children is fixed. Some menu links may not be available as parents if selecting them would exceed this limit.
Weight
9
In the menu, the heavier links will sink and the lighter links will be positioned nearer the top.
