Install MediaWiki as local knowledgebase management software on RedHat 6.4

Andy Tang
Systems and Electronic Resources Librarian
Kilgore College

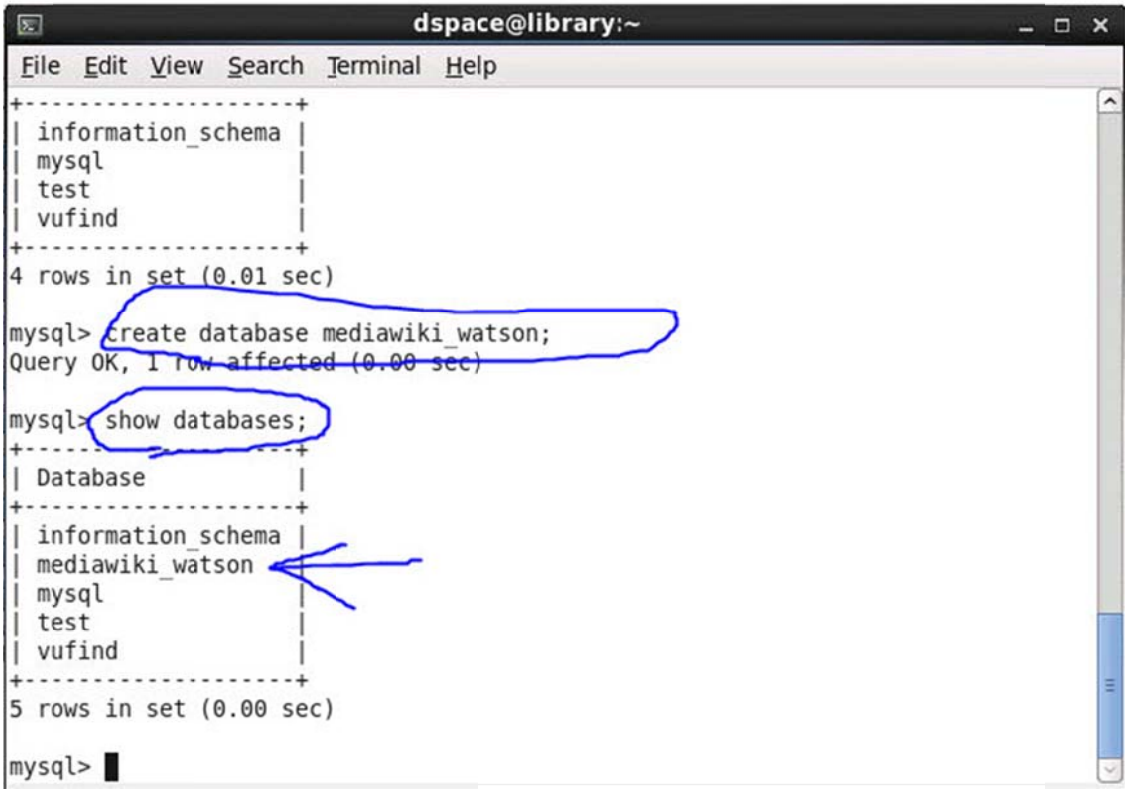

Login MySQL database

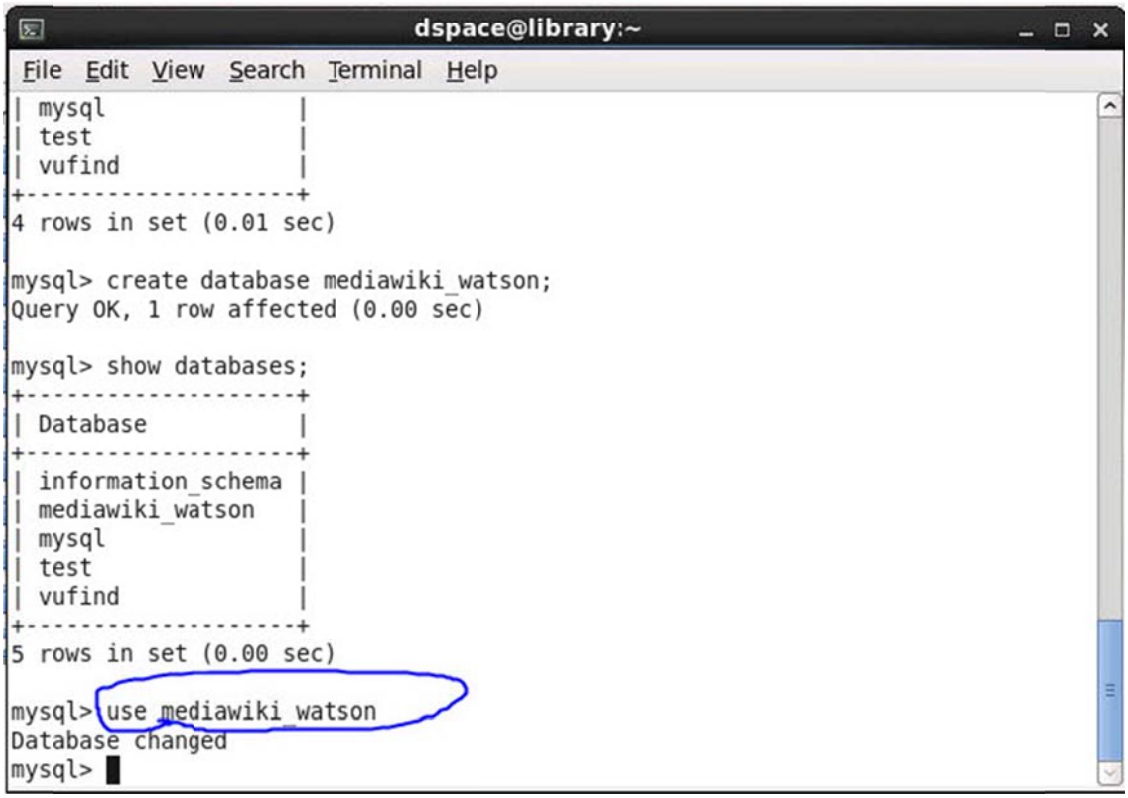

Run Show databases query to check currect databases

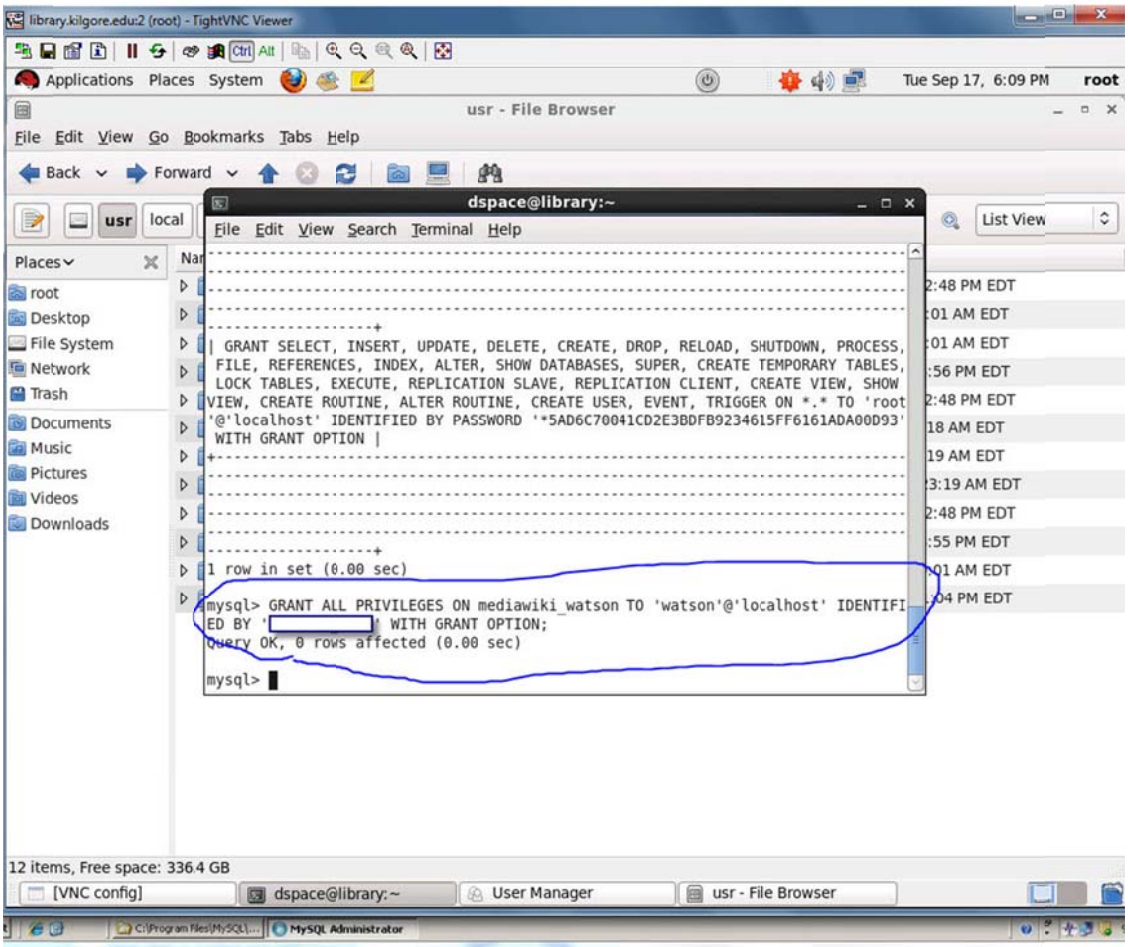

Create a database for mediawiki and test whether it is created successful

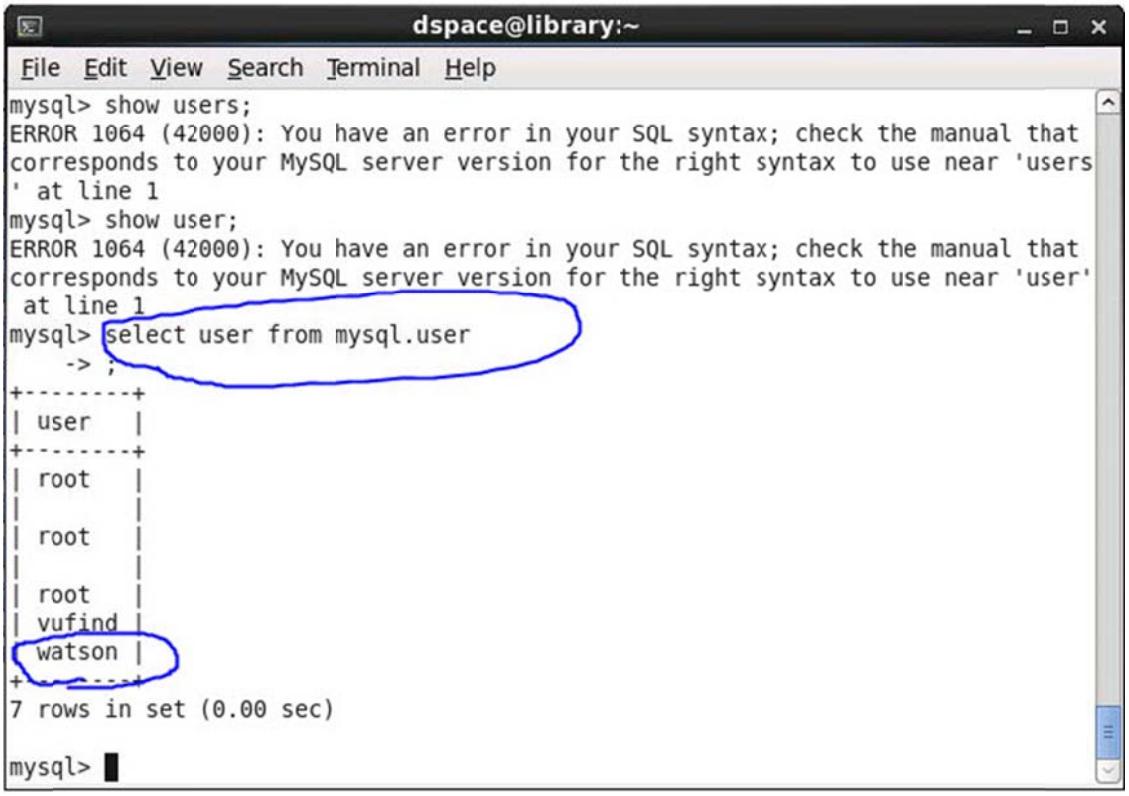

Select mediawiki_watson database

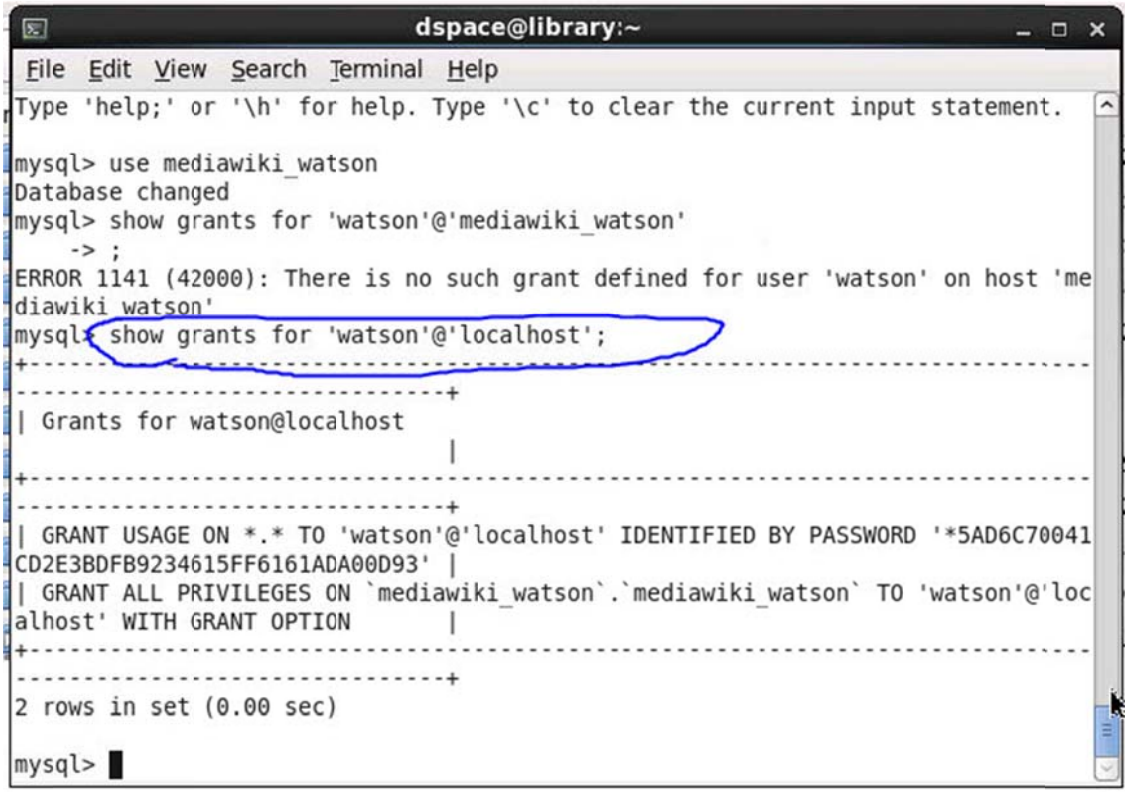

Grant all priviledges to user watson

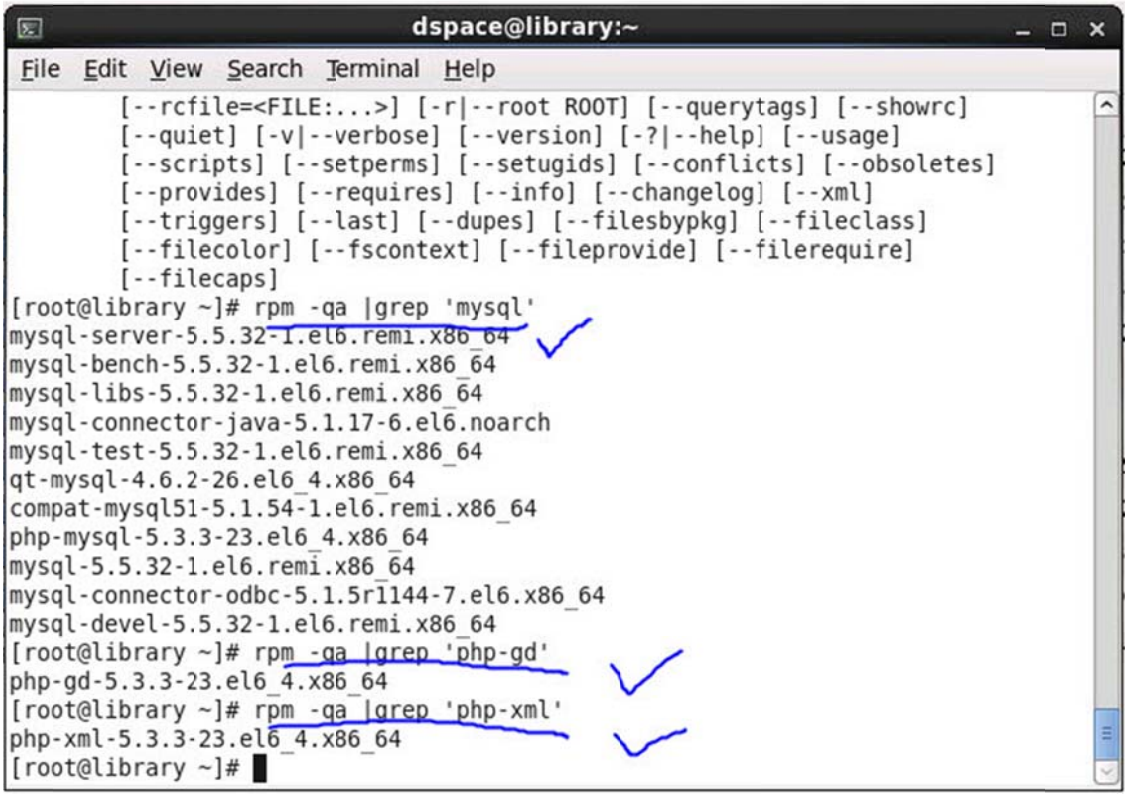

Use query to get the list all users and check whether watson user is there.

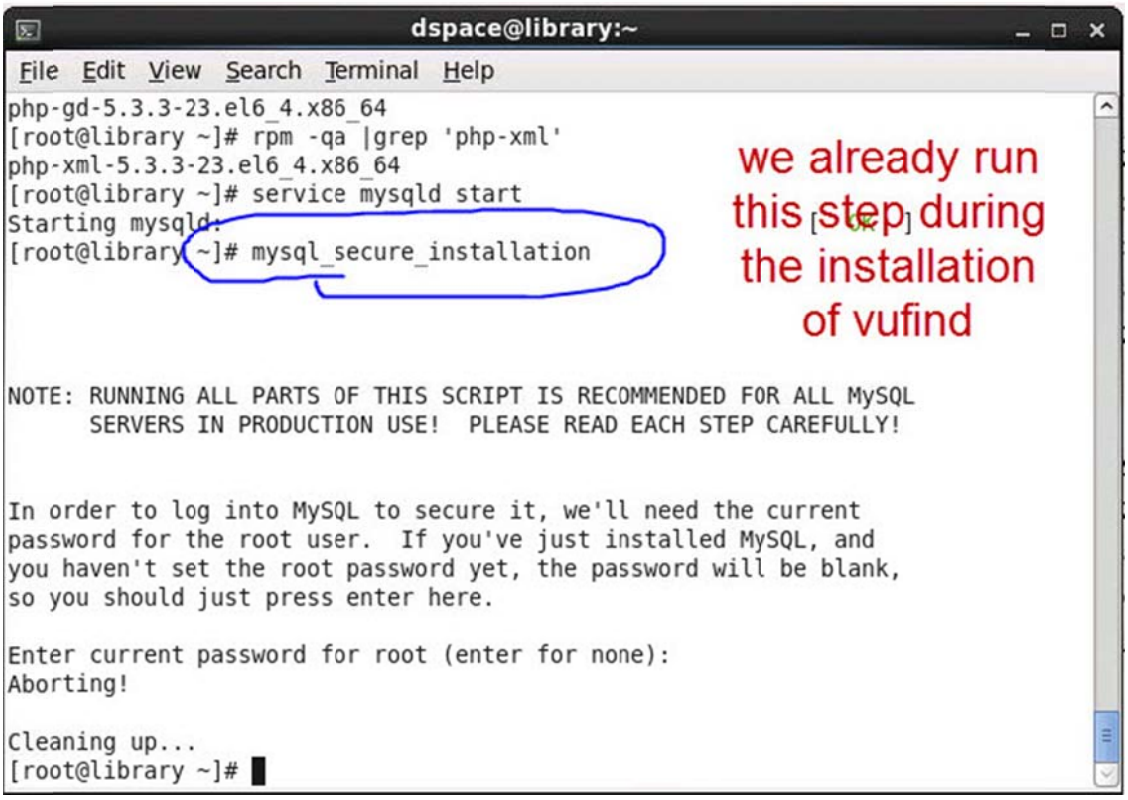

Check whether the grants is given to watson user correctly

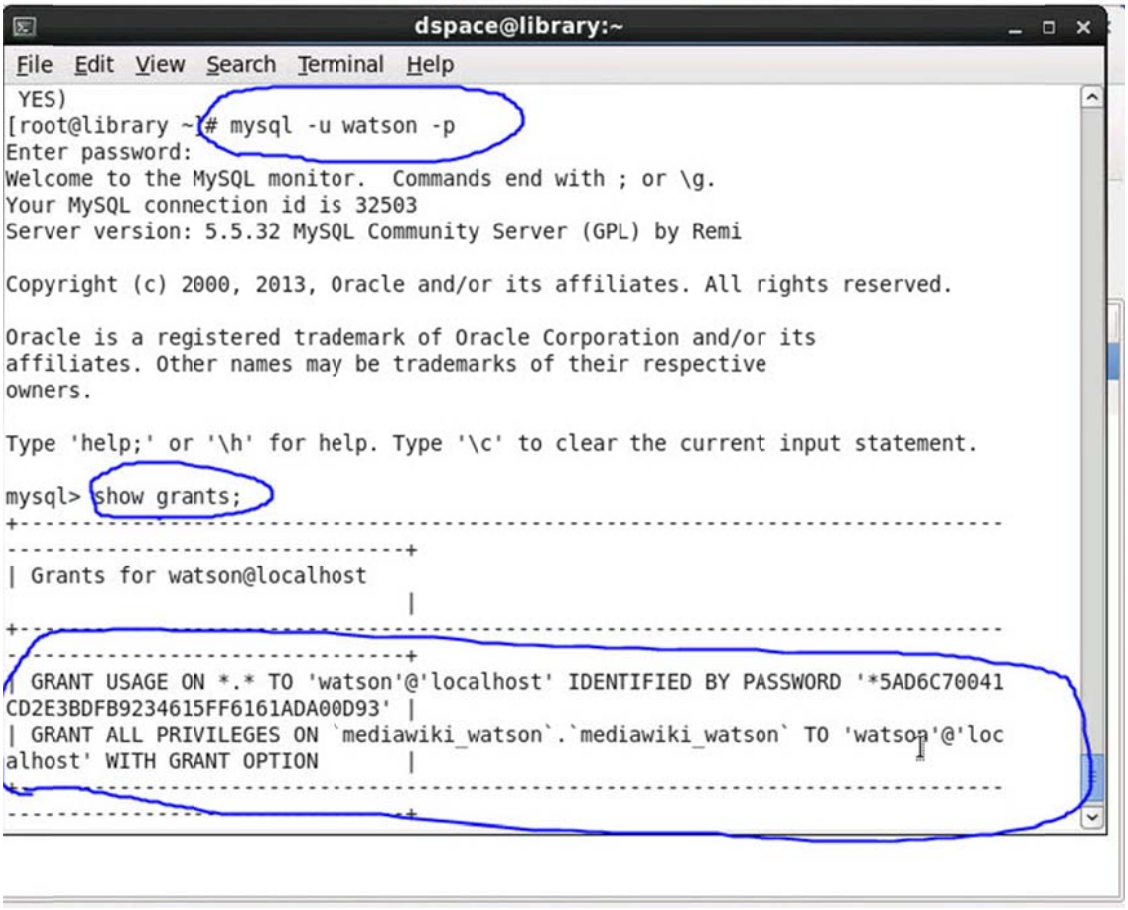

Check whether MySQL, php-gd, and php-xml are installed

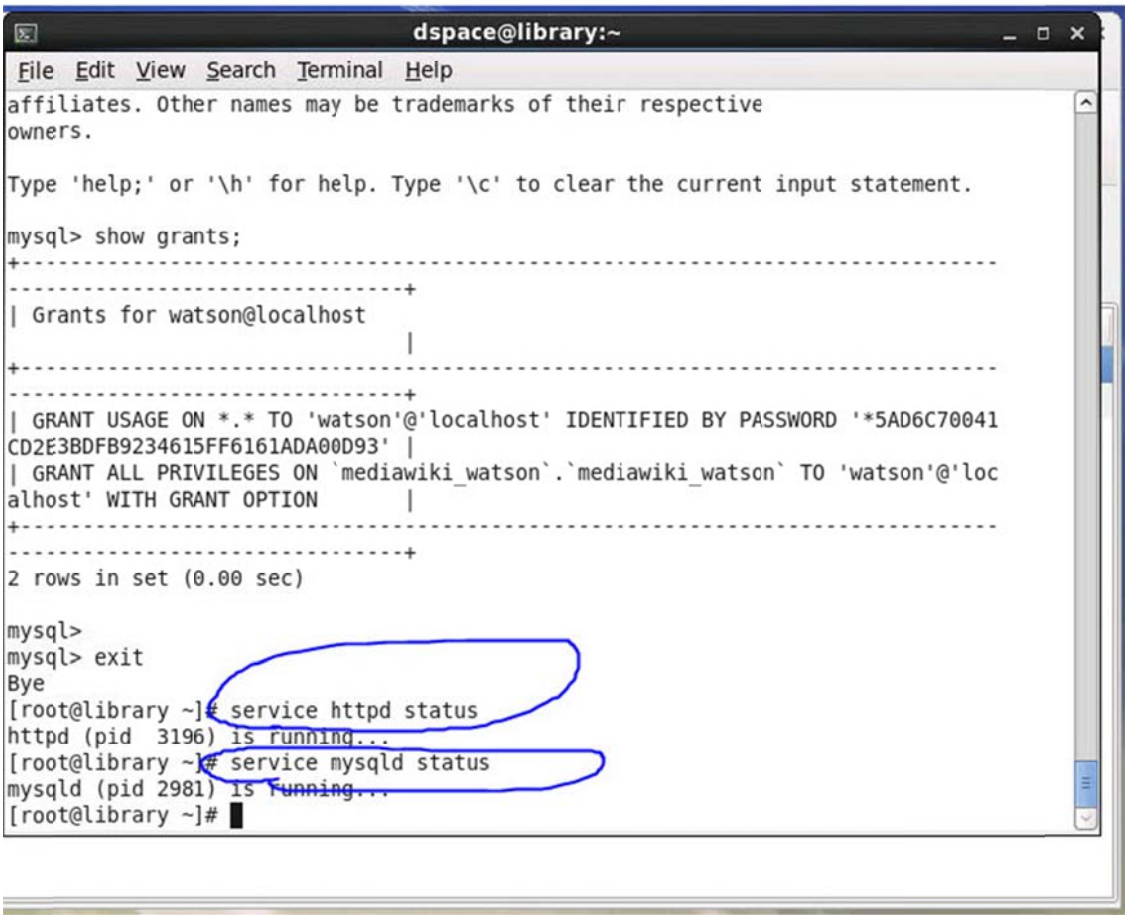

Secure MySQL

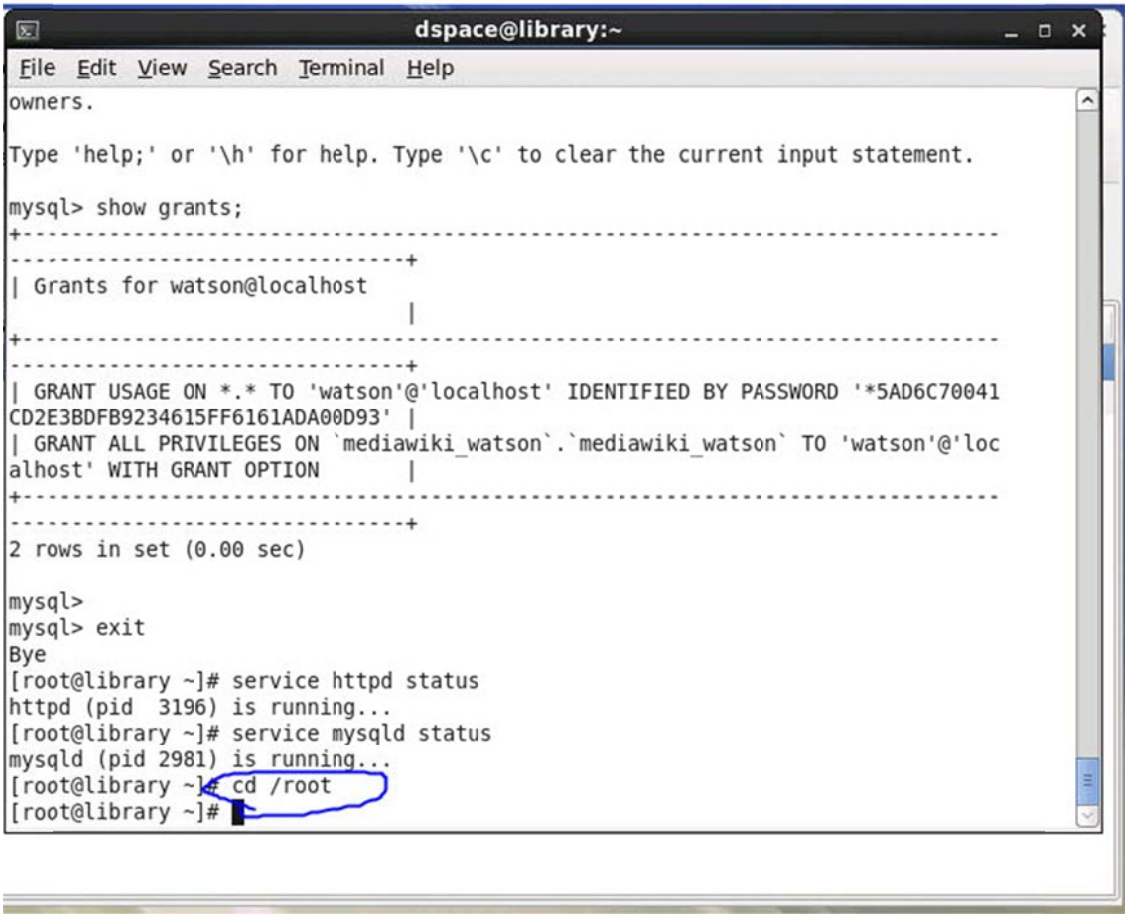

Login MySQL by using user Watson, and show grants it achieved.

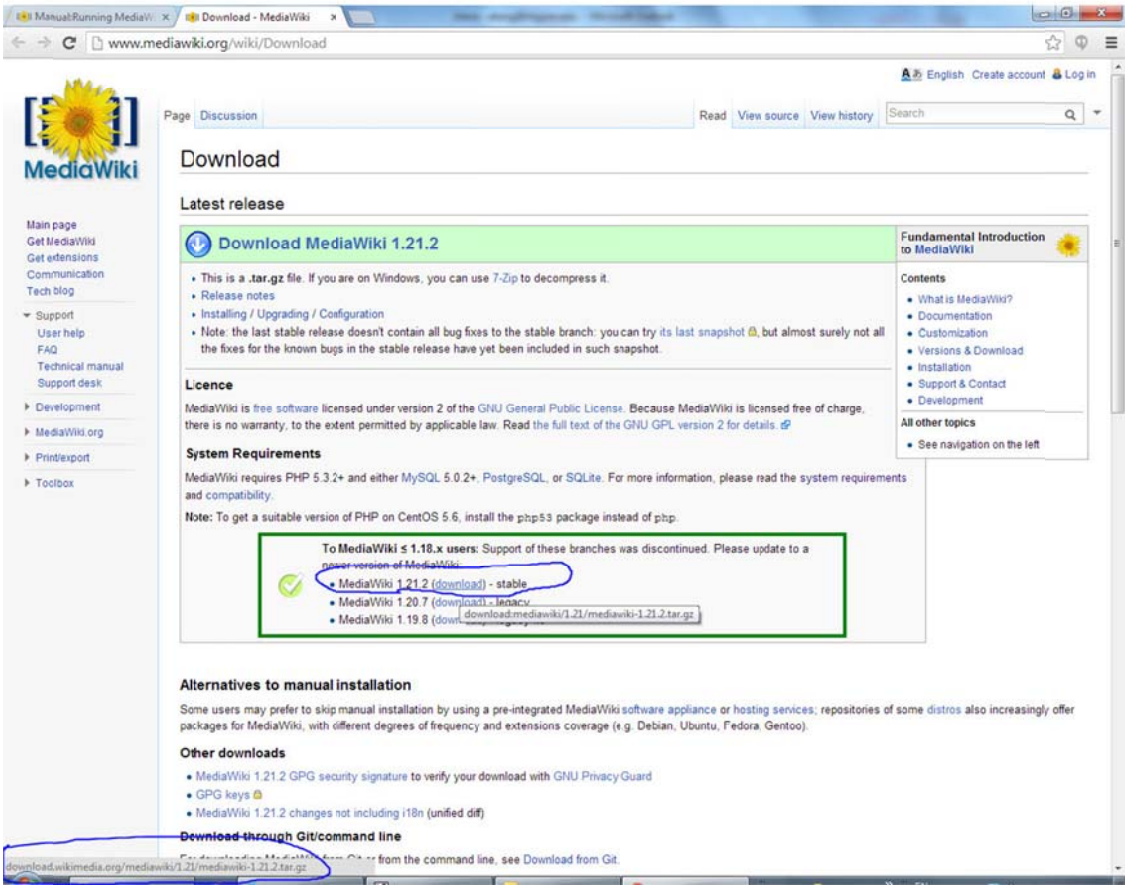

Check the status of httpd and mysqld

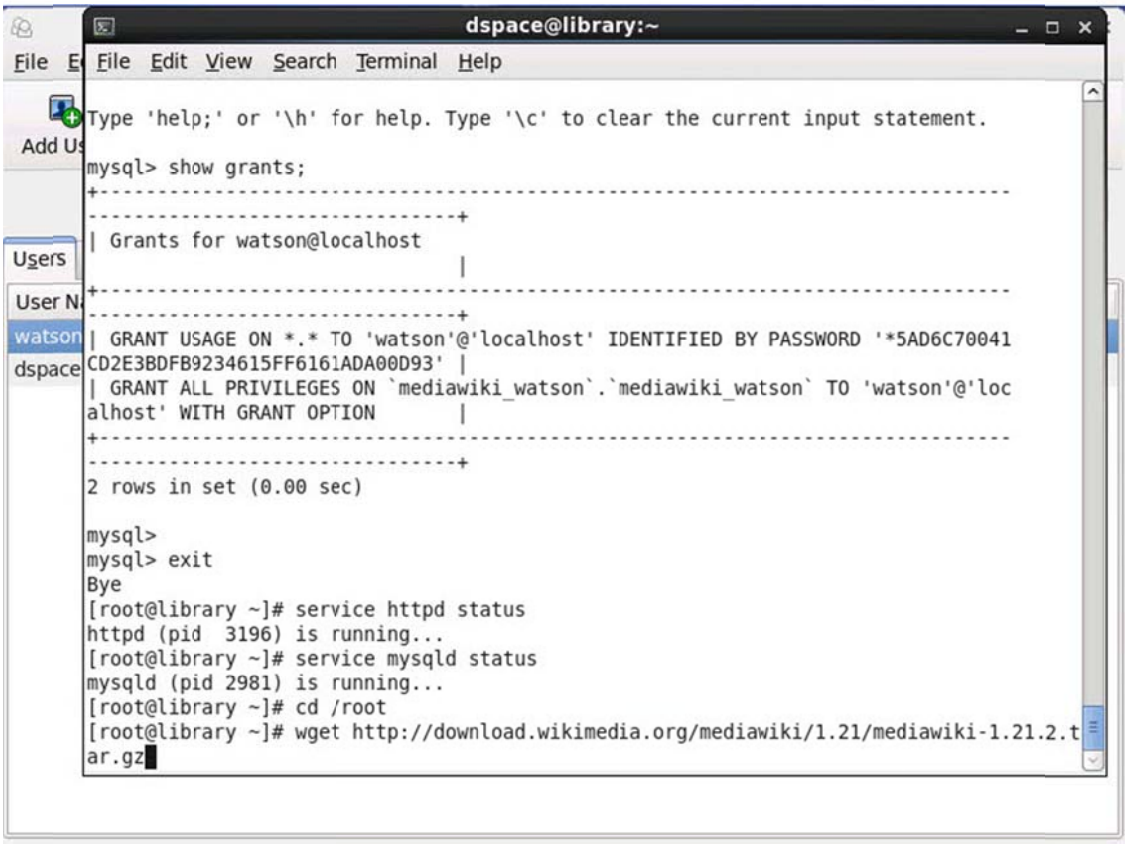

Enter into root folder

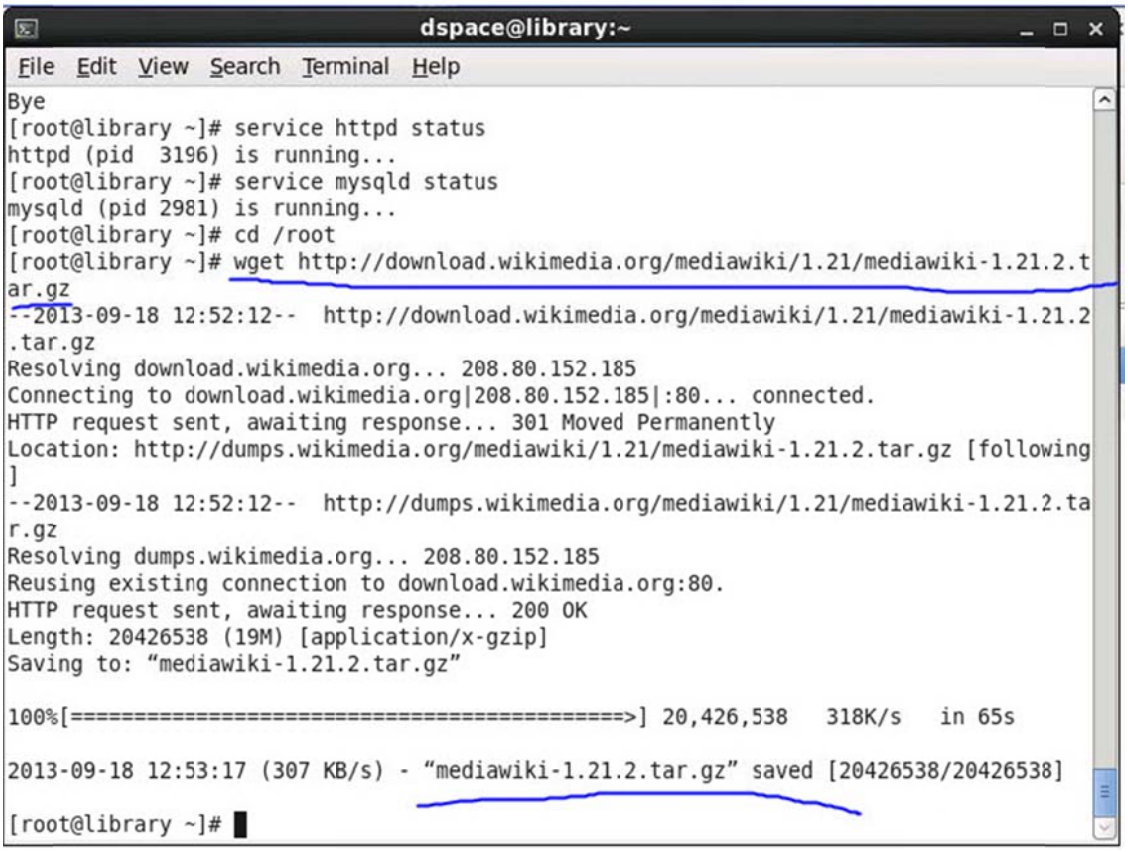

Download mediawiki from midiawiki.org

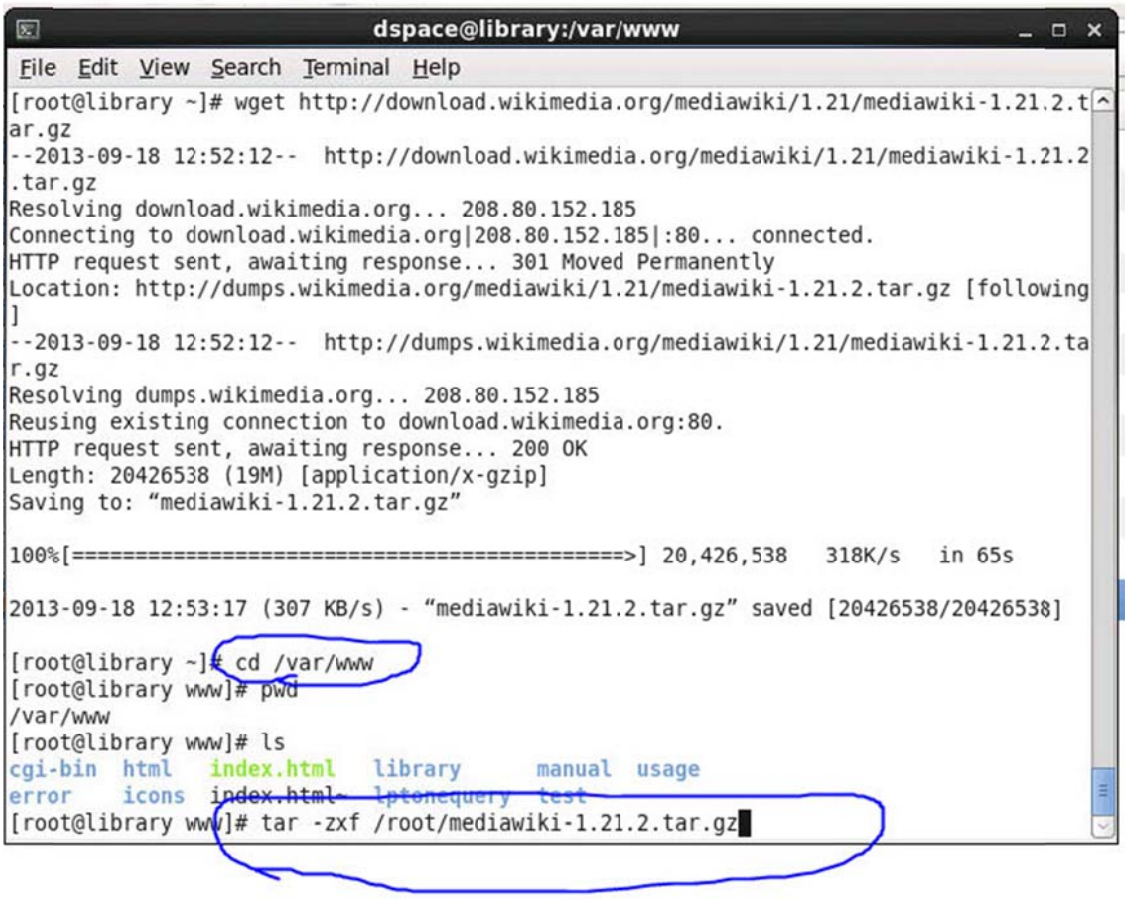

Use wget command to grab the mediawiki compressed package

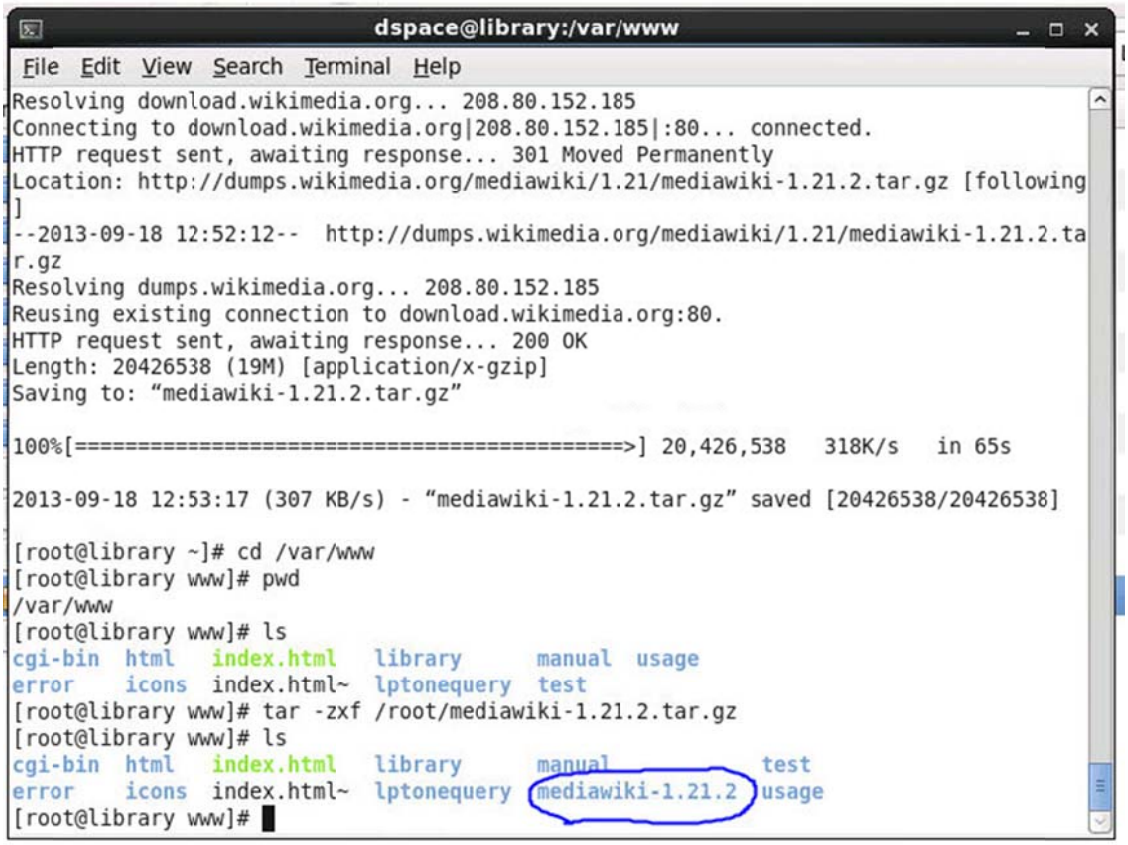

Mediawiki 1.21 installation package is grabed

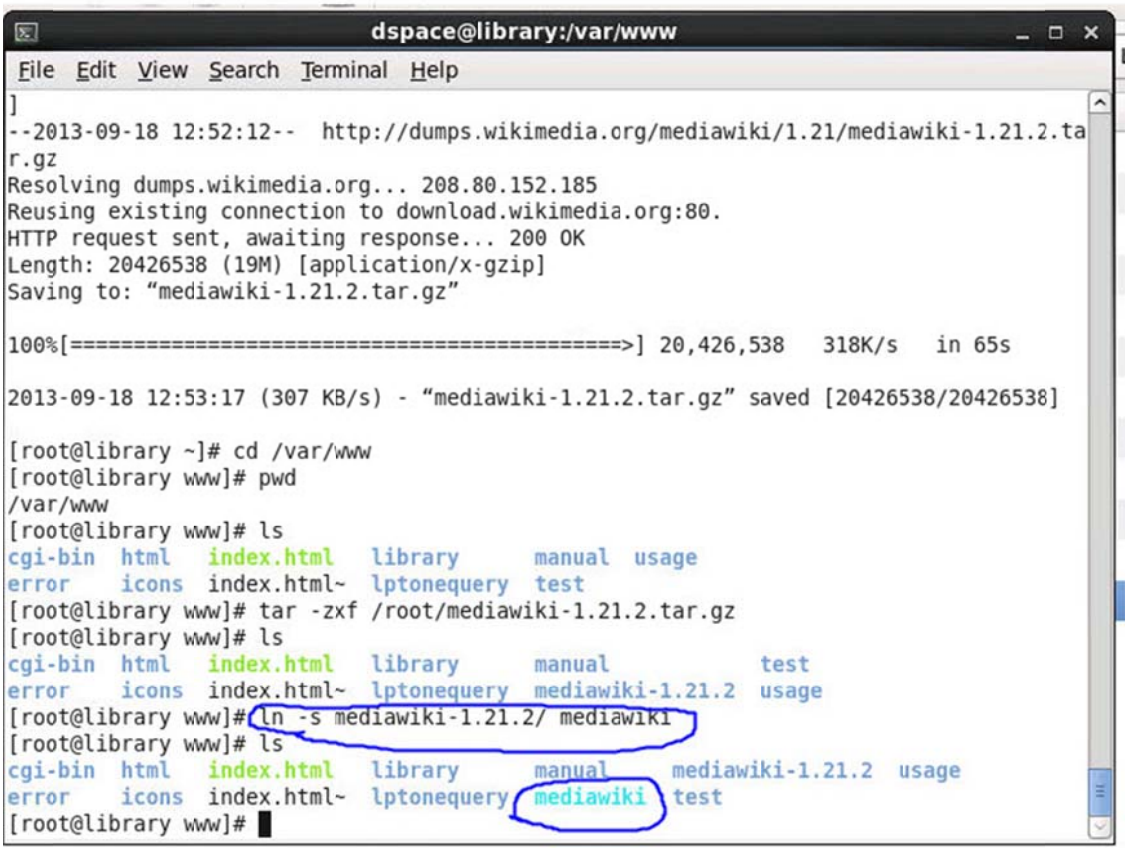

Enter into /var/www folder and use tar command to uncompress the package we downloaed

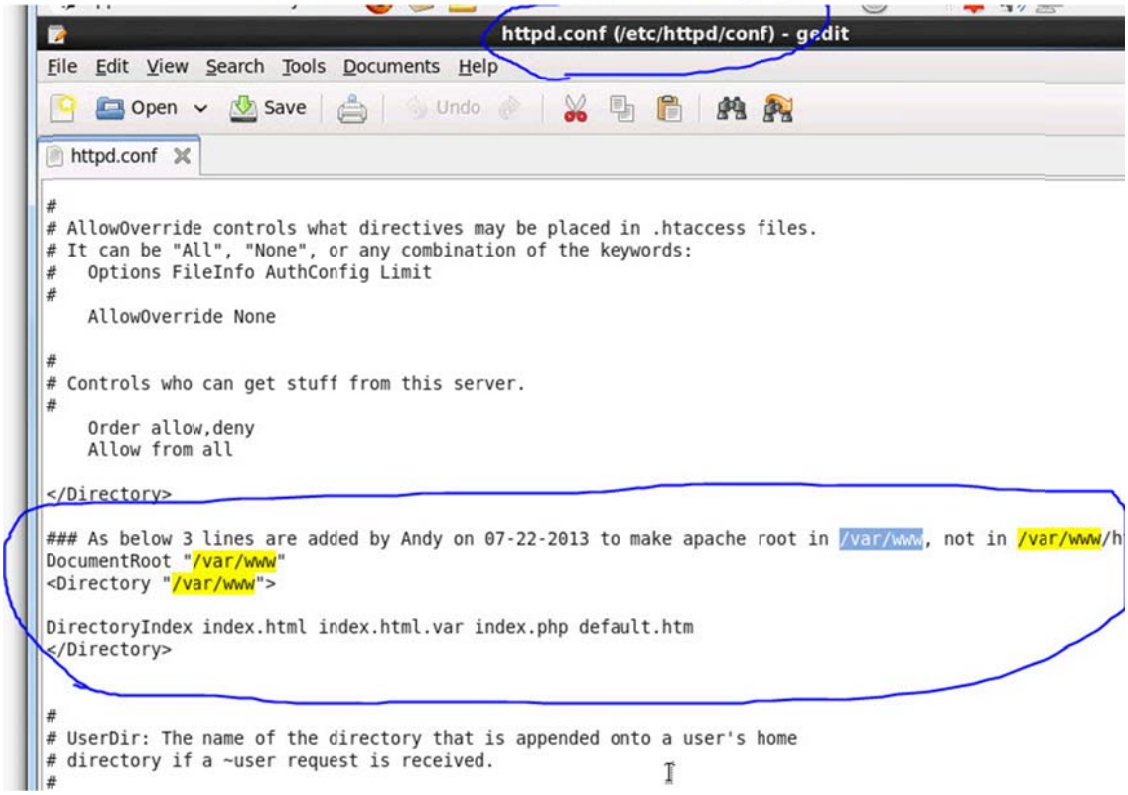

List the folder we extracted mediawiki to

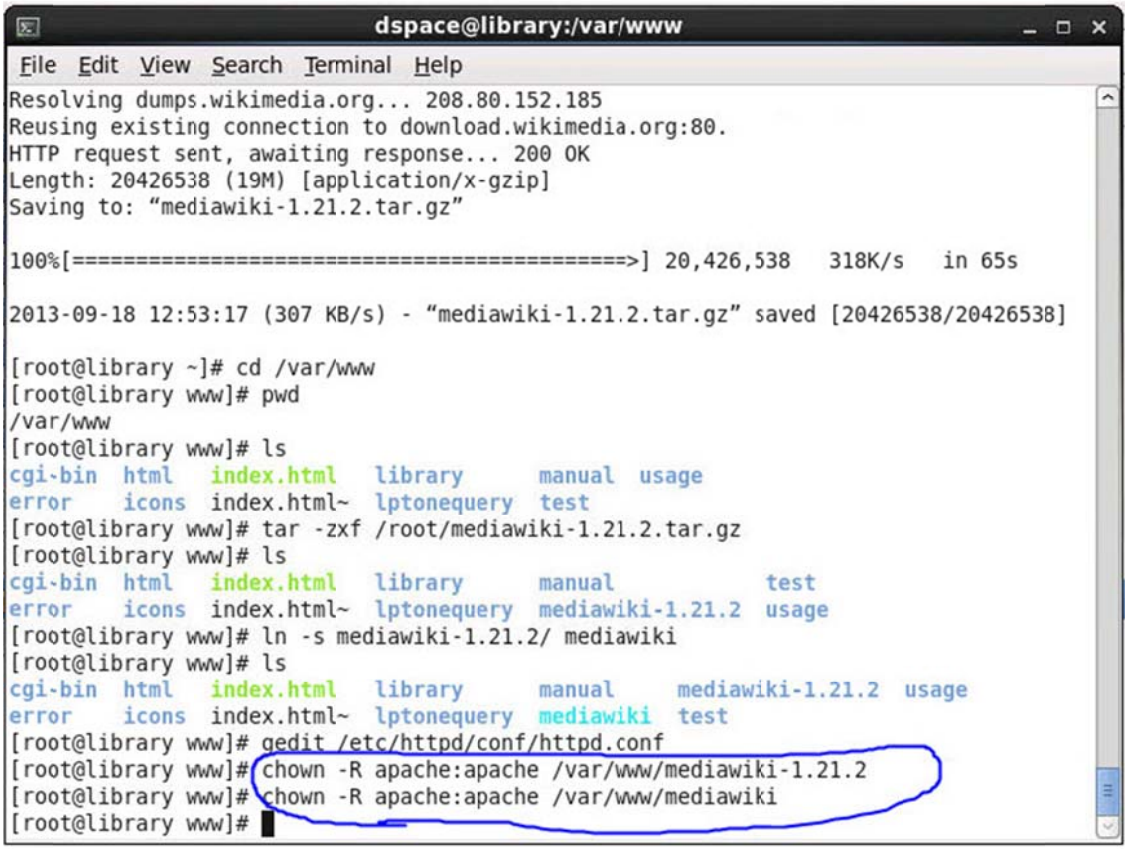

Create a link for mediawiki-1.21.2

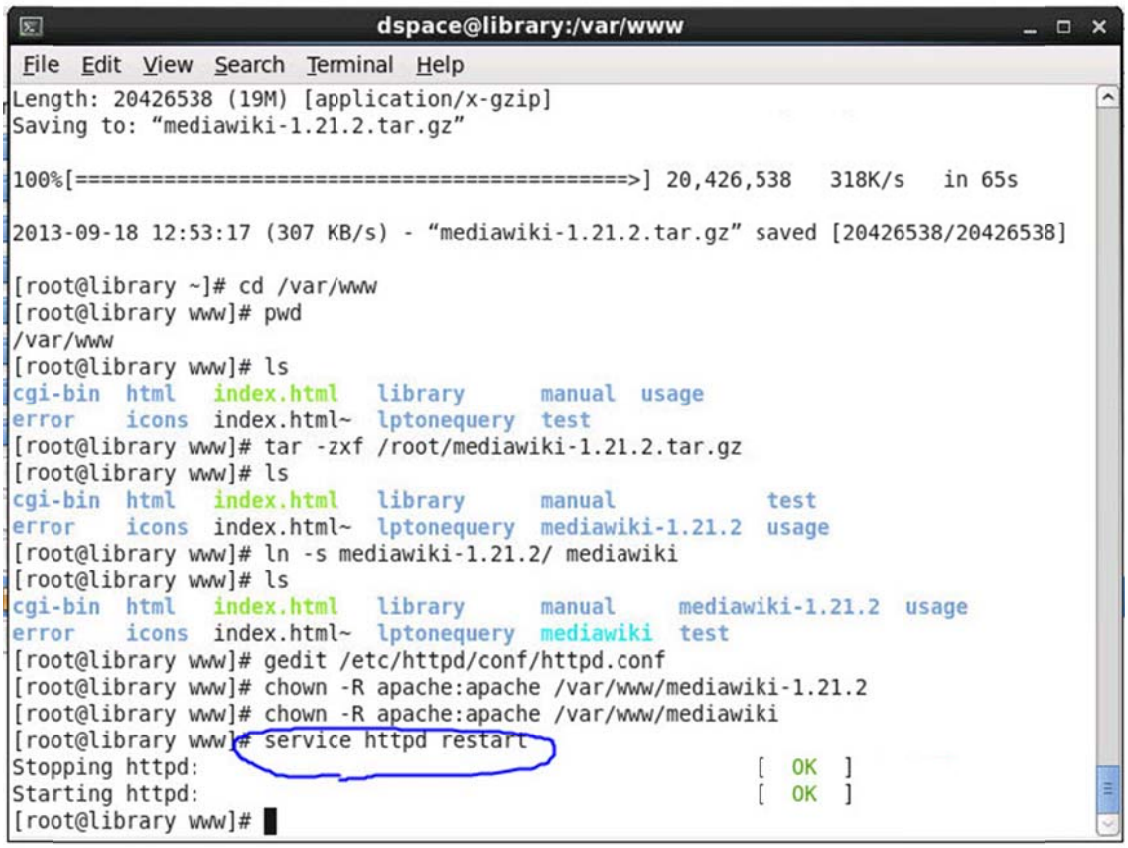

Modify Apache configuration file and give the folder /var/www the capability to run php

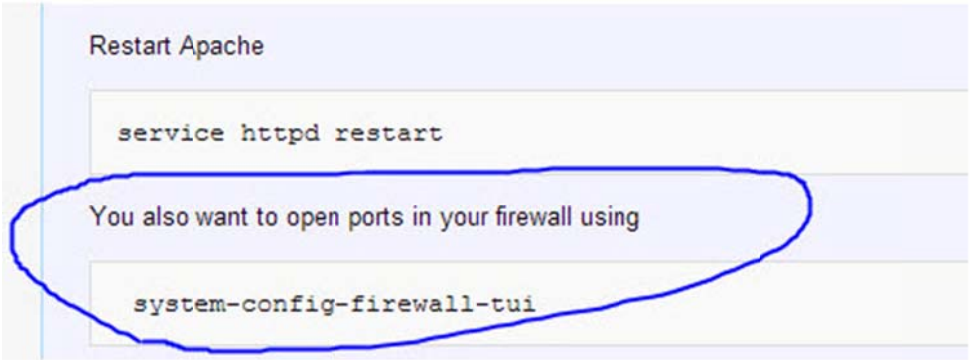

Give the user group and user apache the priviledge to access mediawiki

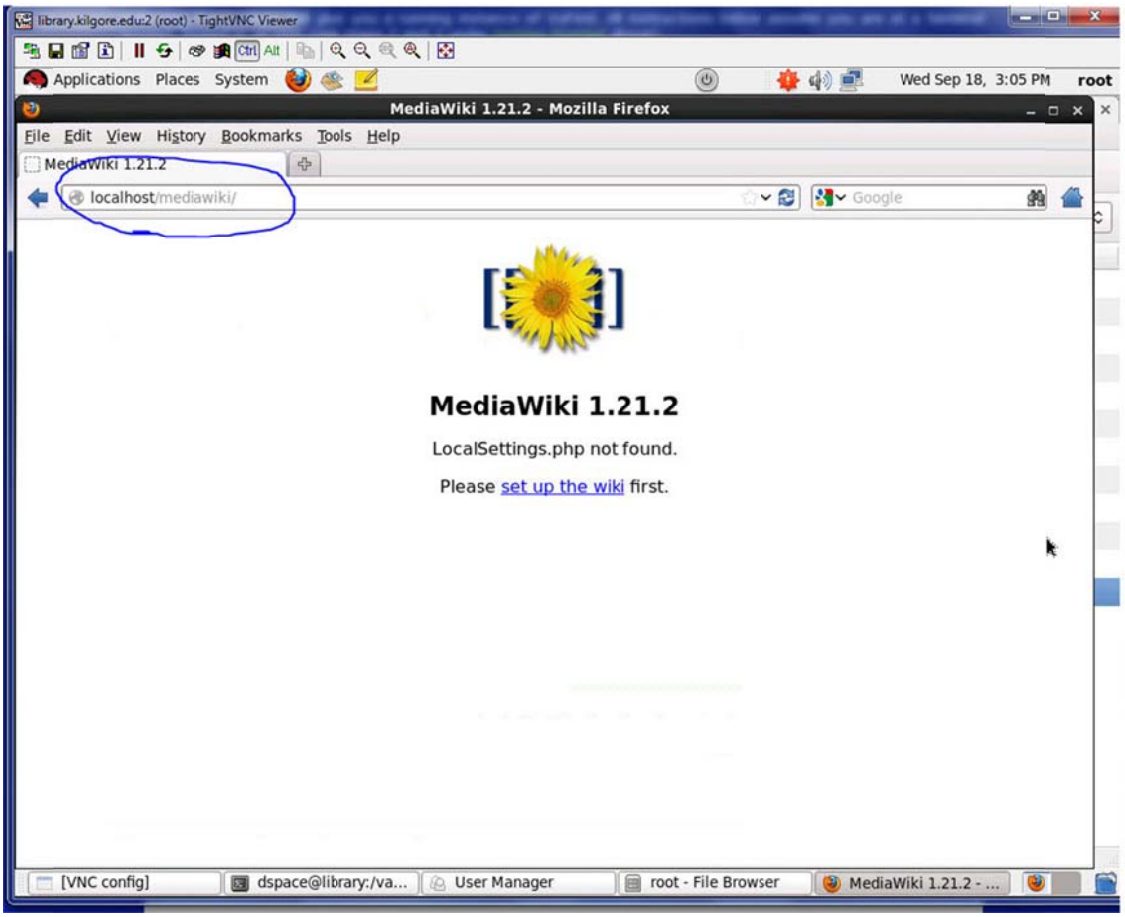

Restart Apache

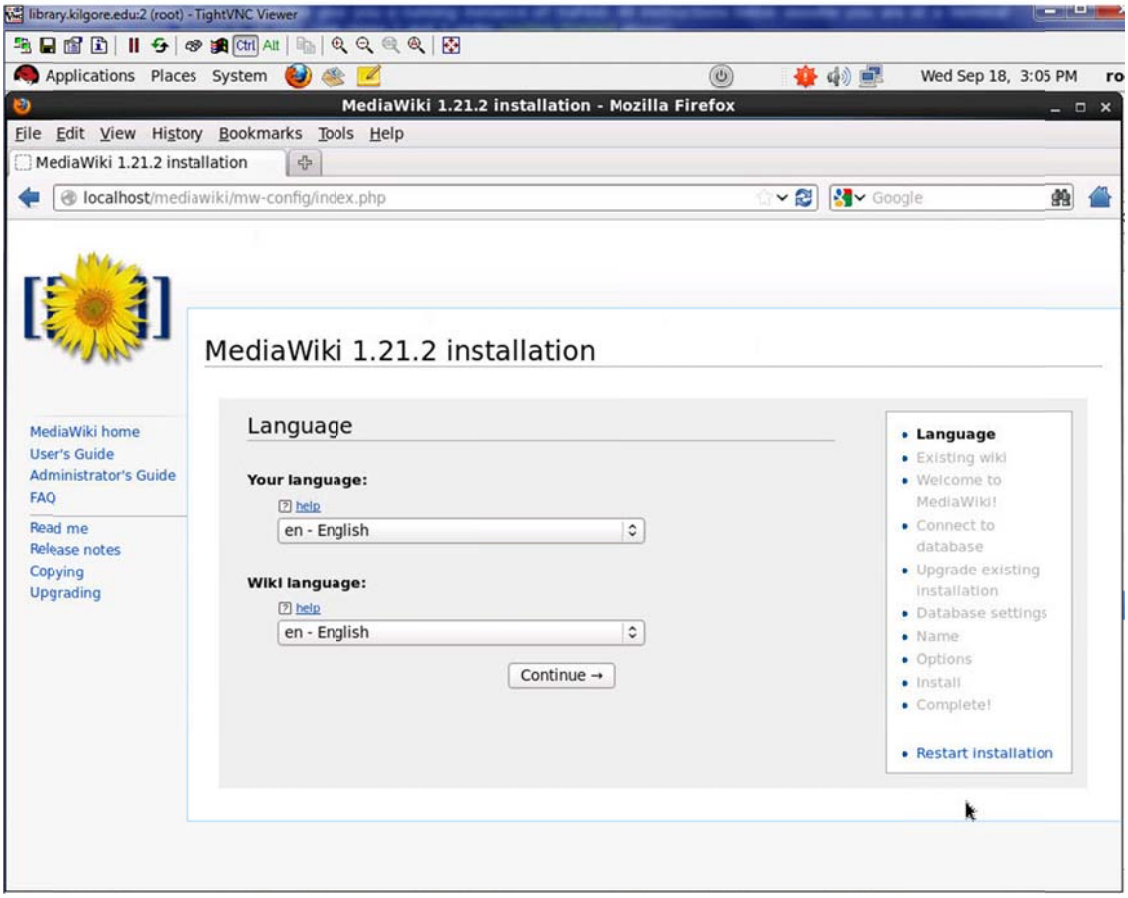

Enable the http and https in system firewall

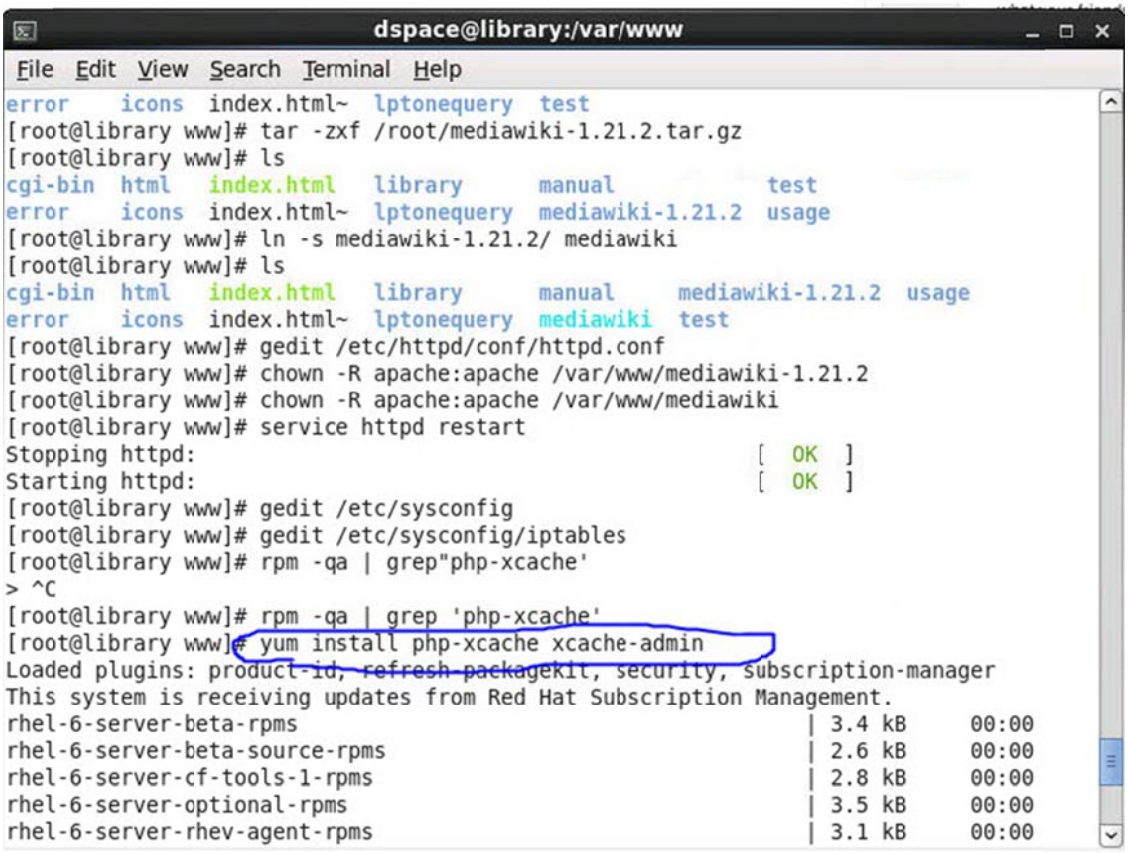

Mediawiki is started

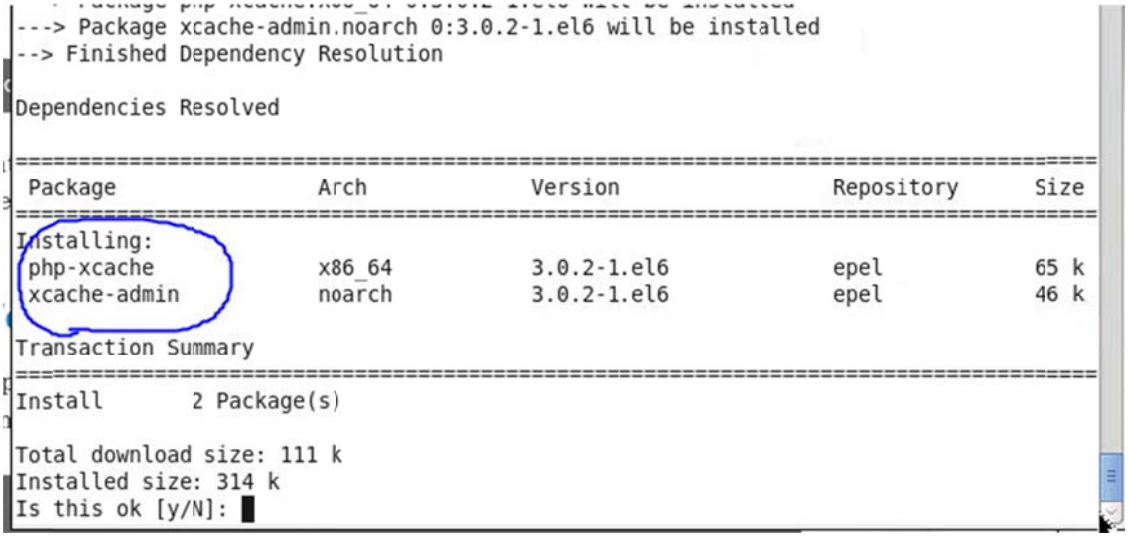

Choose the language

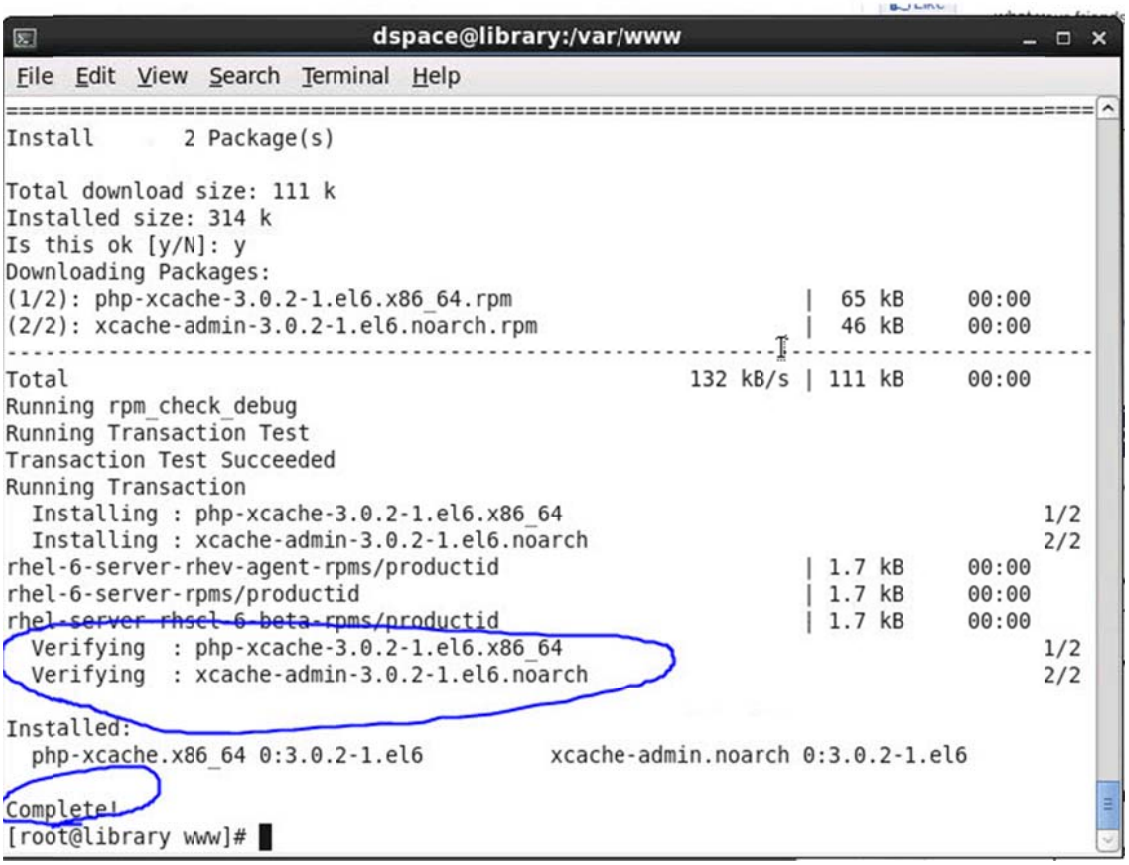

Use "rpm -qa | grep 'php-xcache'" command to check whether php-xcache is installed, then install php-xcache and xcache-admin

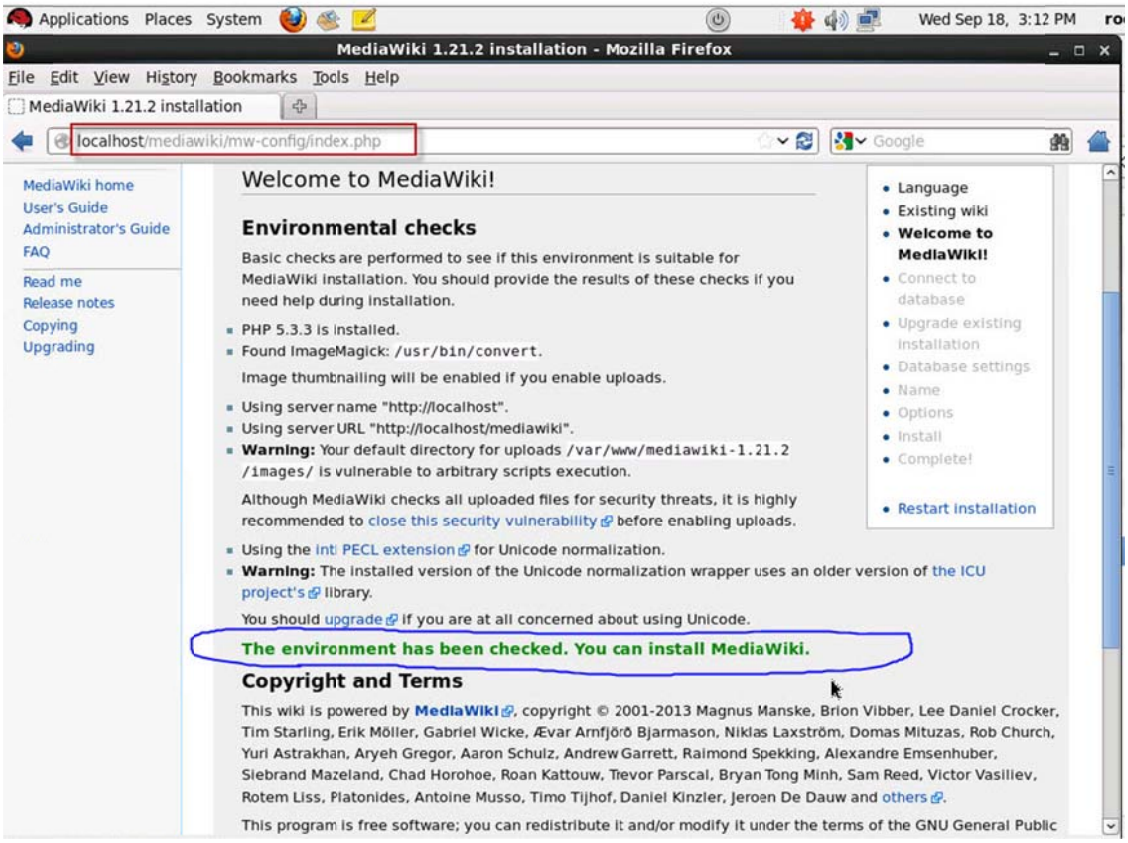

Press Y to install xcache

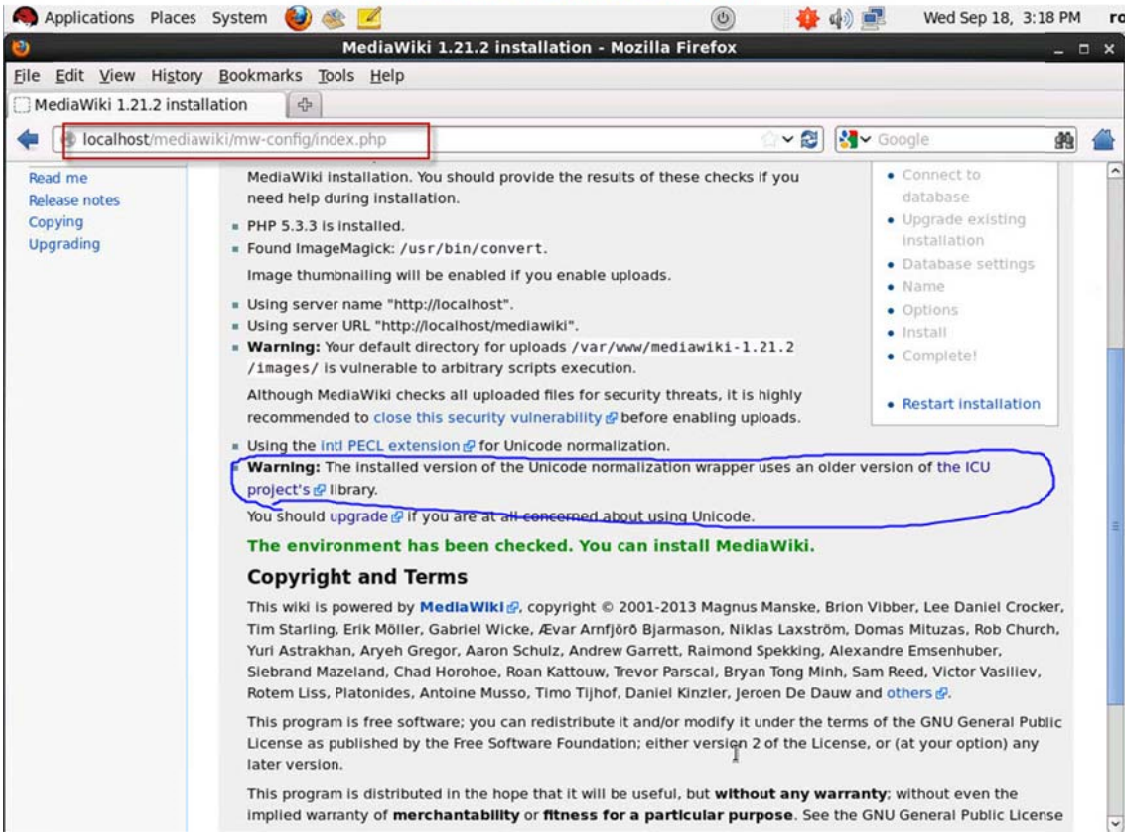

Php-xcache and xcache-admin are installed successfully.

The environment check is passed and I could continue to install MediaWiki

I cannot neglect one warning which is "The installed verison of Unicode normalization wrapper uses an older version of the ICU project library.

Issue the command to install ICU

```
icu4j-javadoc.x86_64              1:4.2.1-5.el6              rhel-6-server-optional-rpms
[root@library www]# yum install icu

  icu.x86_64 0:4.2.1-9.1.el6_2

Complete!
[root@library www]#
```

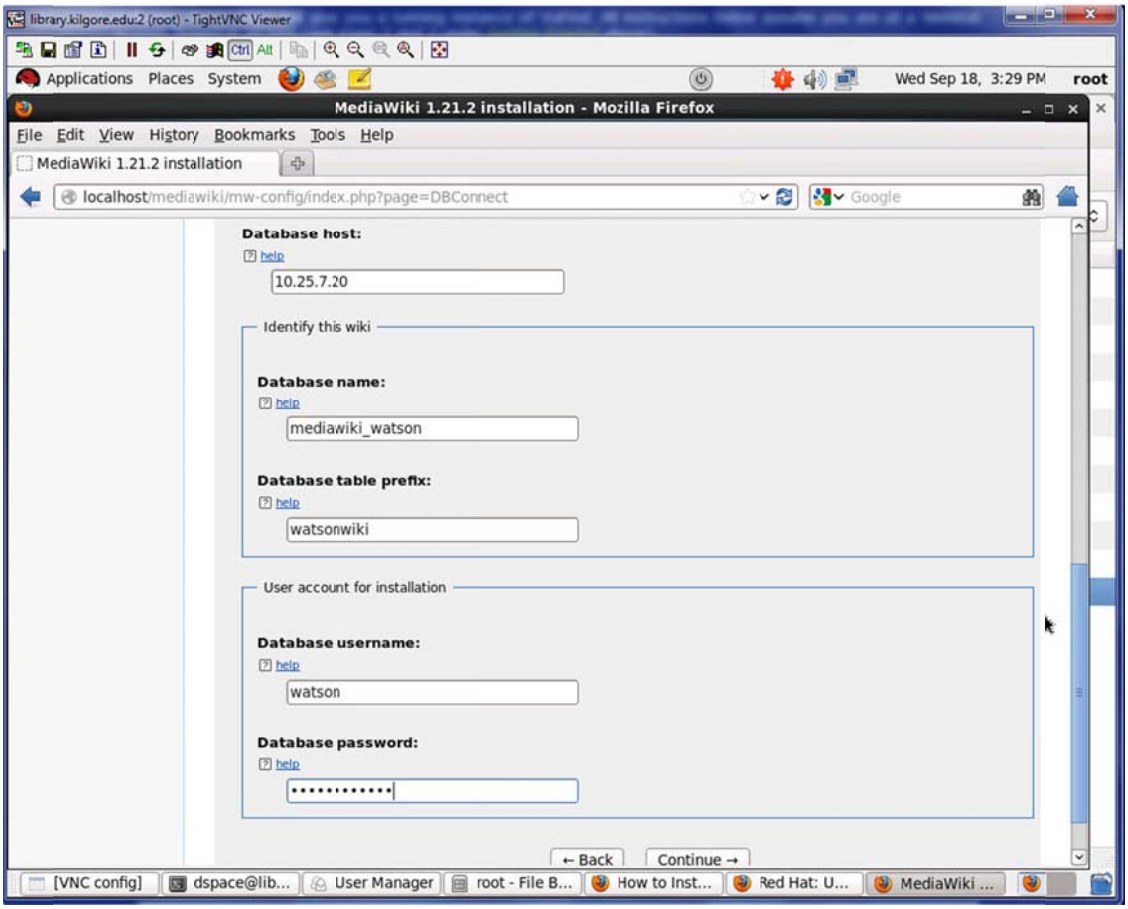

I prepared to installed icu4j

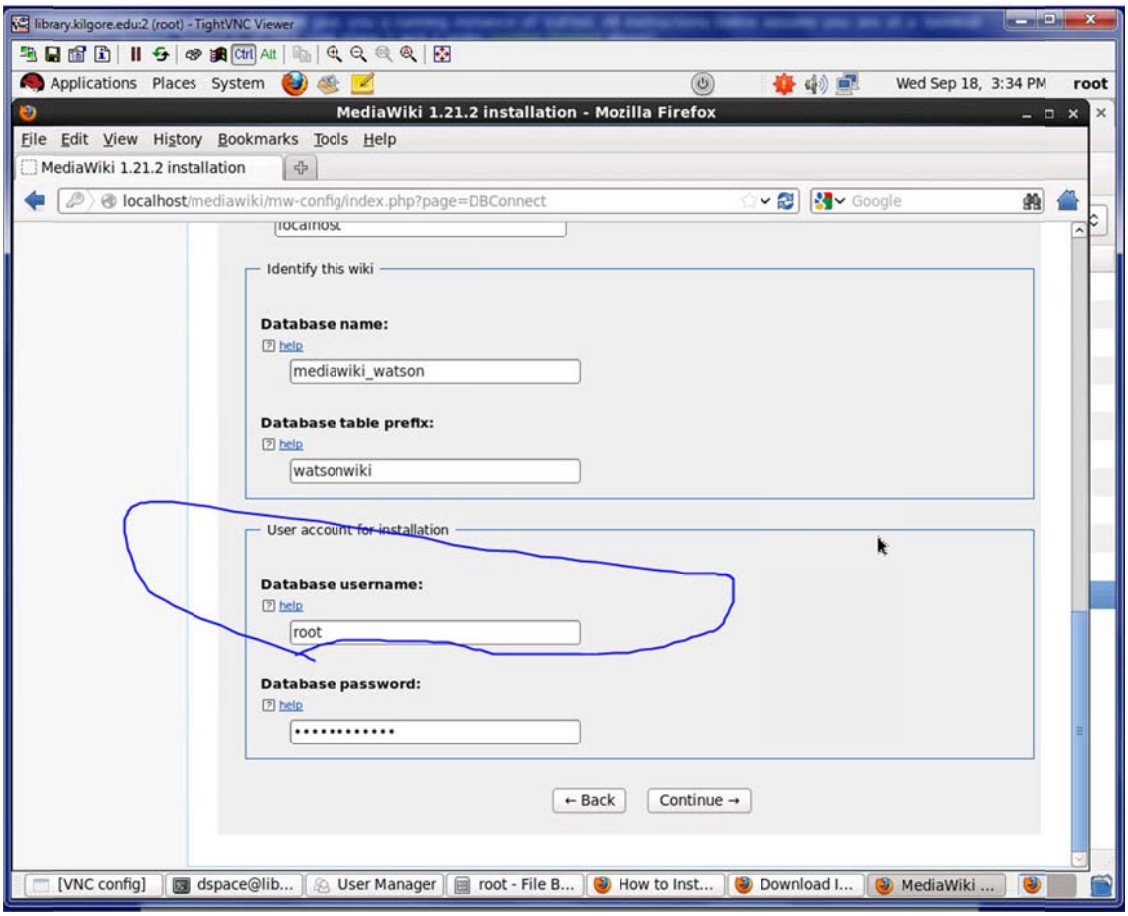

ICU4j is installed successfully

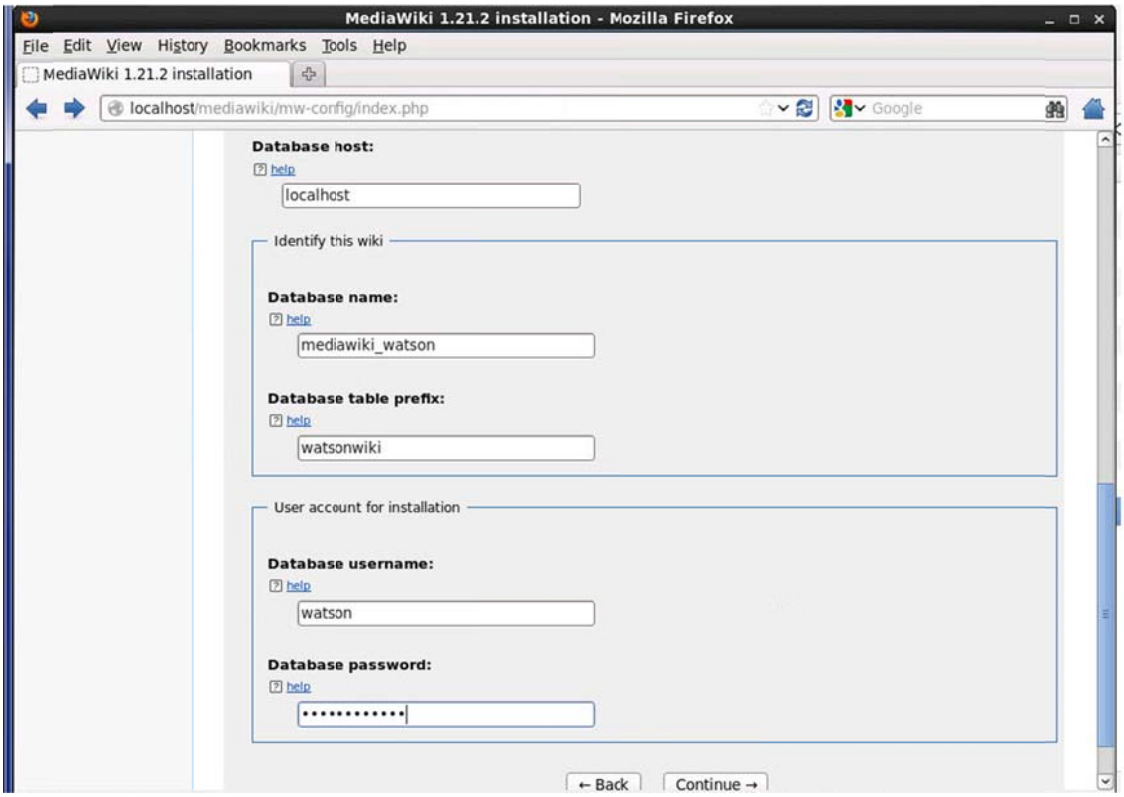

Input the parameters for mediawiki to connect MySQL database

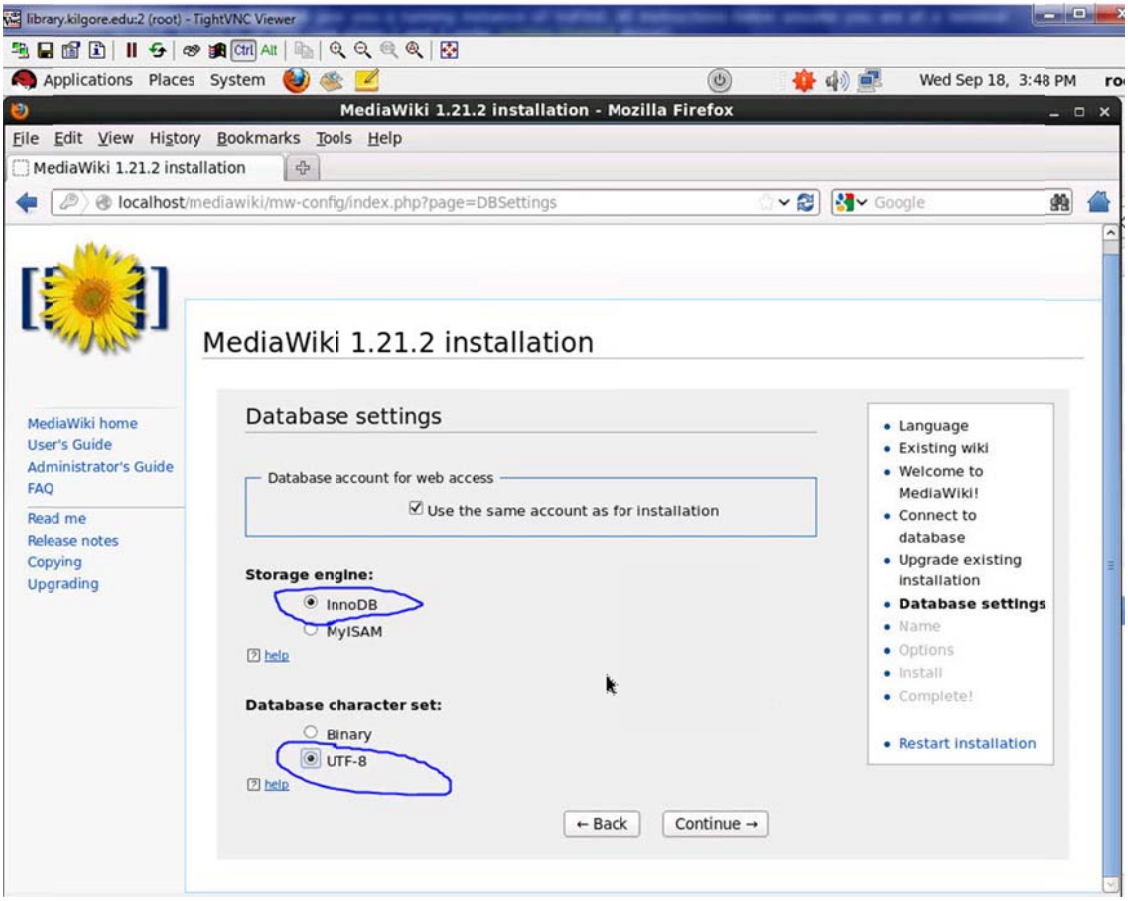

It is not safe to use root identity to let mediawiki to connect to MySQL database

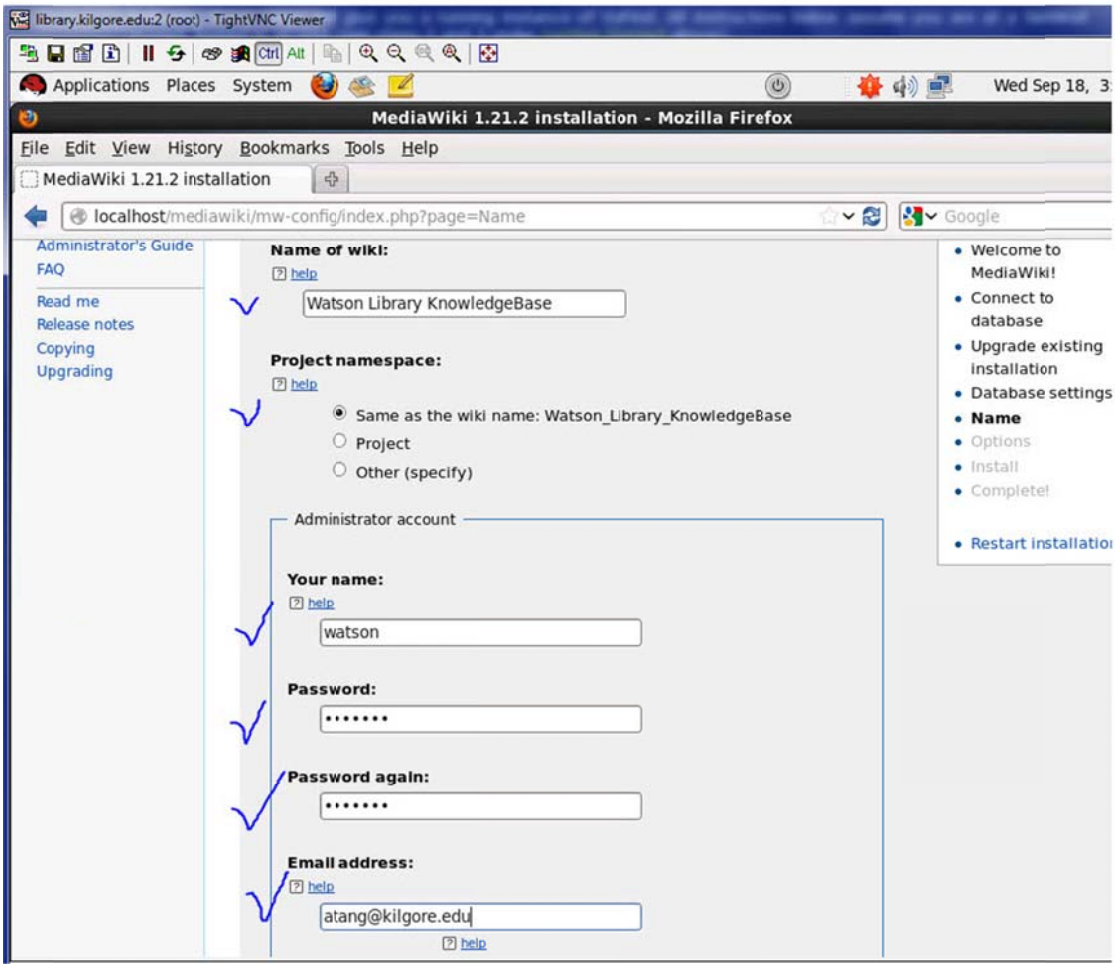

I will use watson as username to connect to MySQL

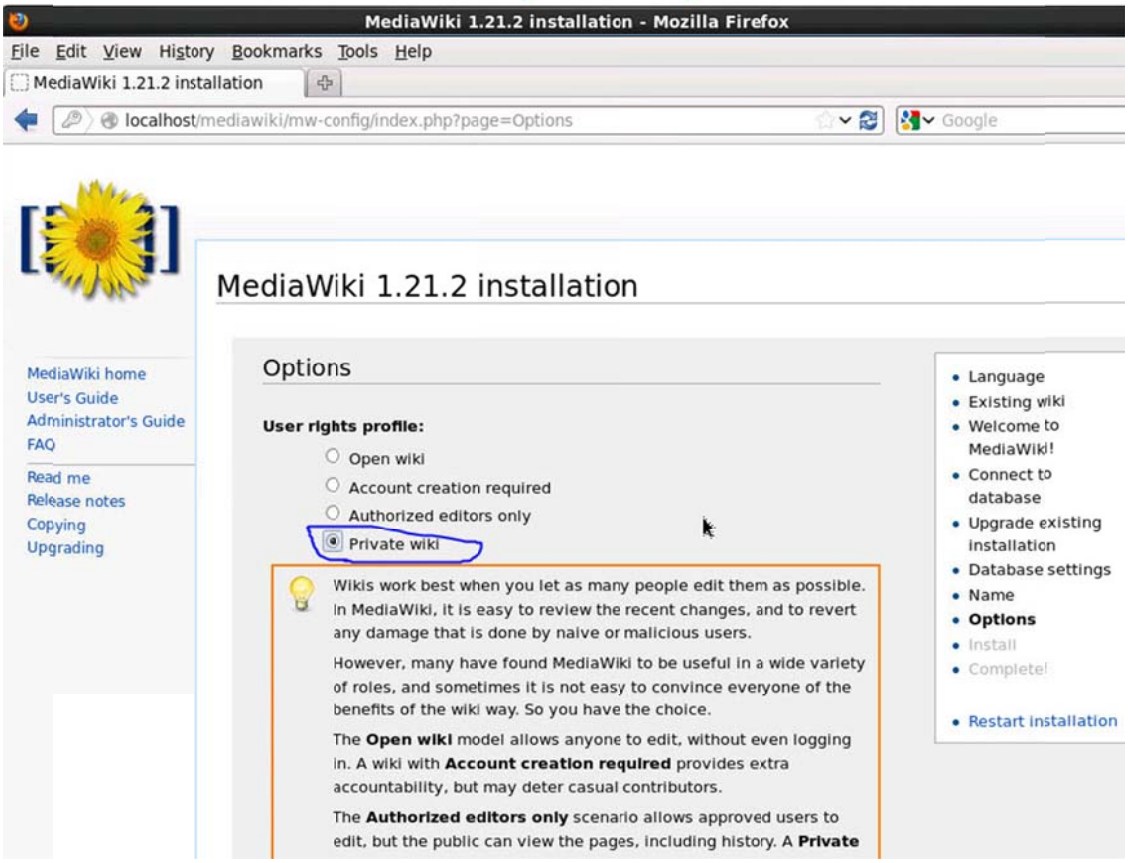

Select InnoDB as storage engine, UTF-8 as character set.

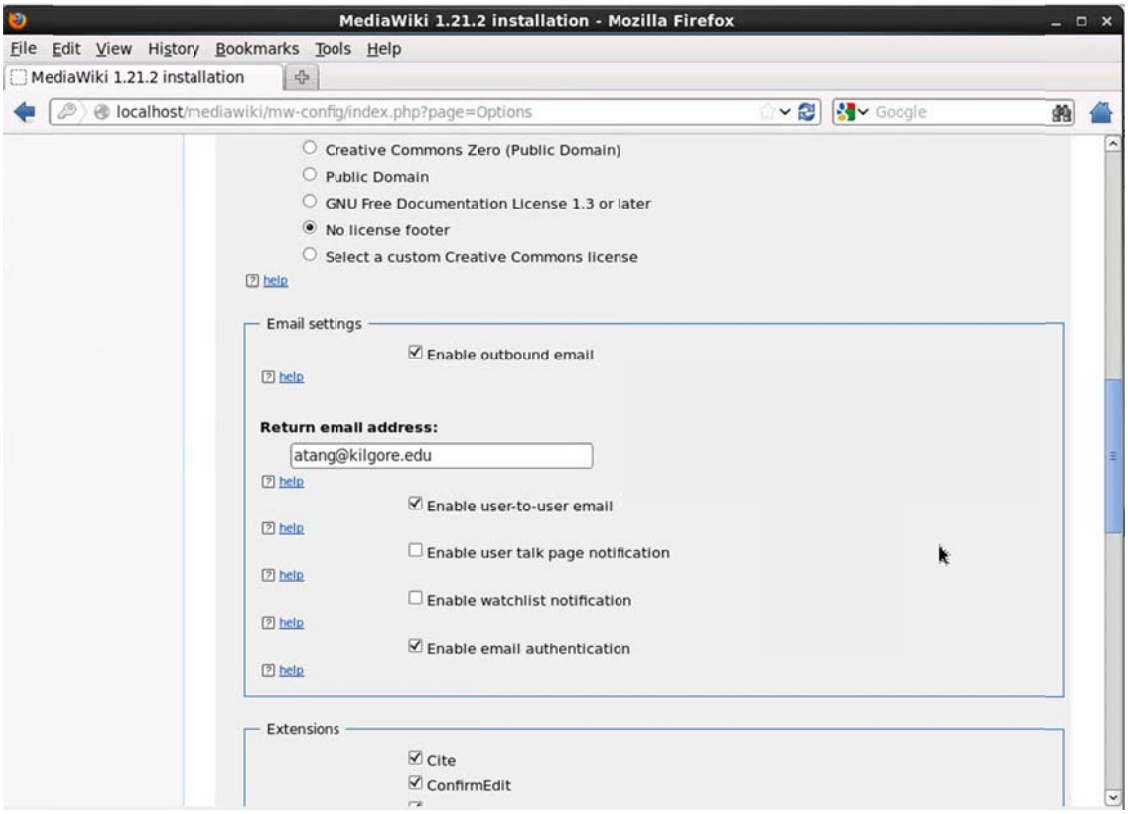

Initialize the name of wiki, namespace, and admin username and password

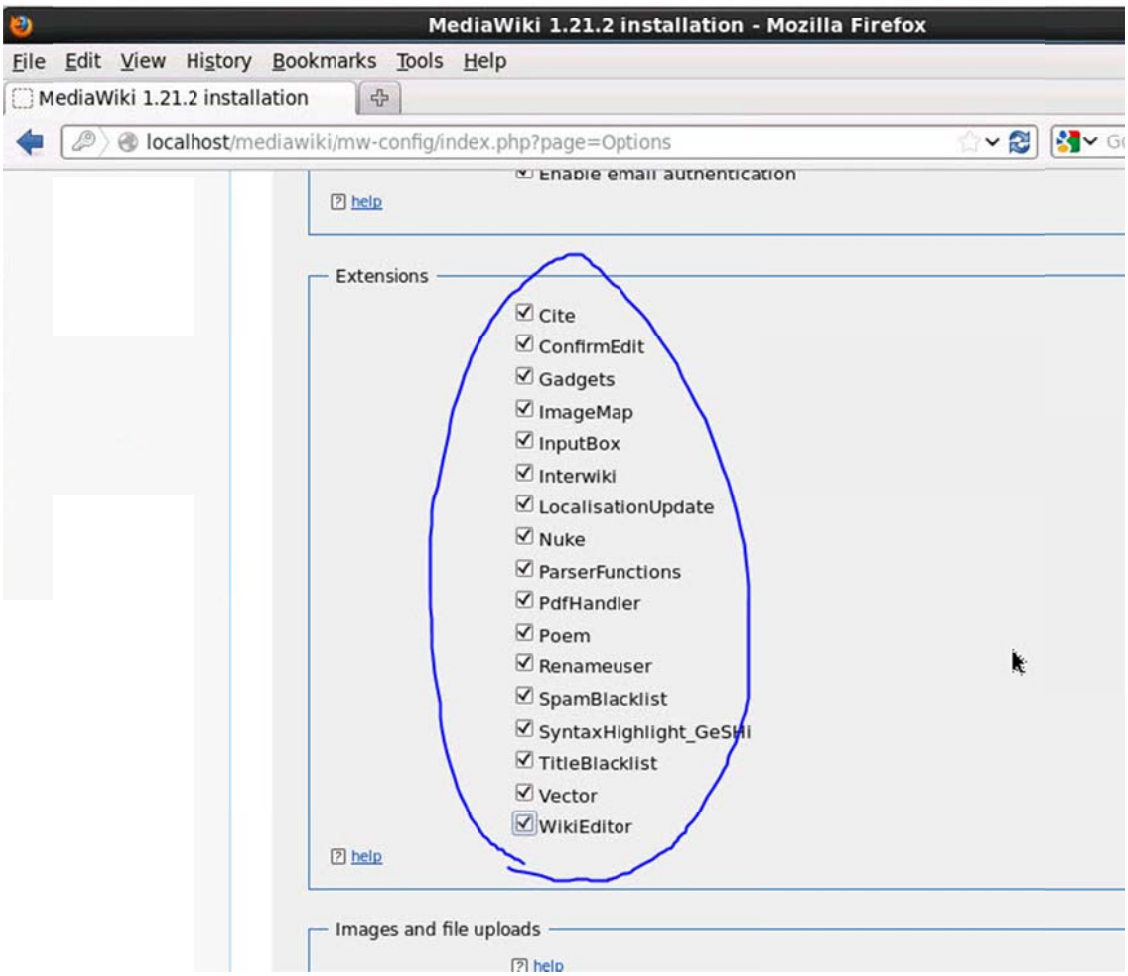

I would like to use this MediaWiki as library knowledgebase to share knowledge among library staffs. So, this wiki is a private wiki and will be password-protected.

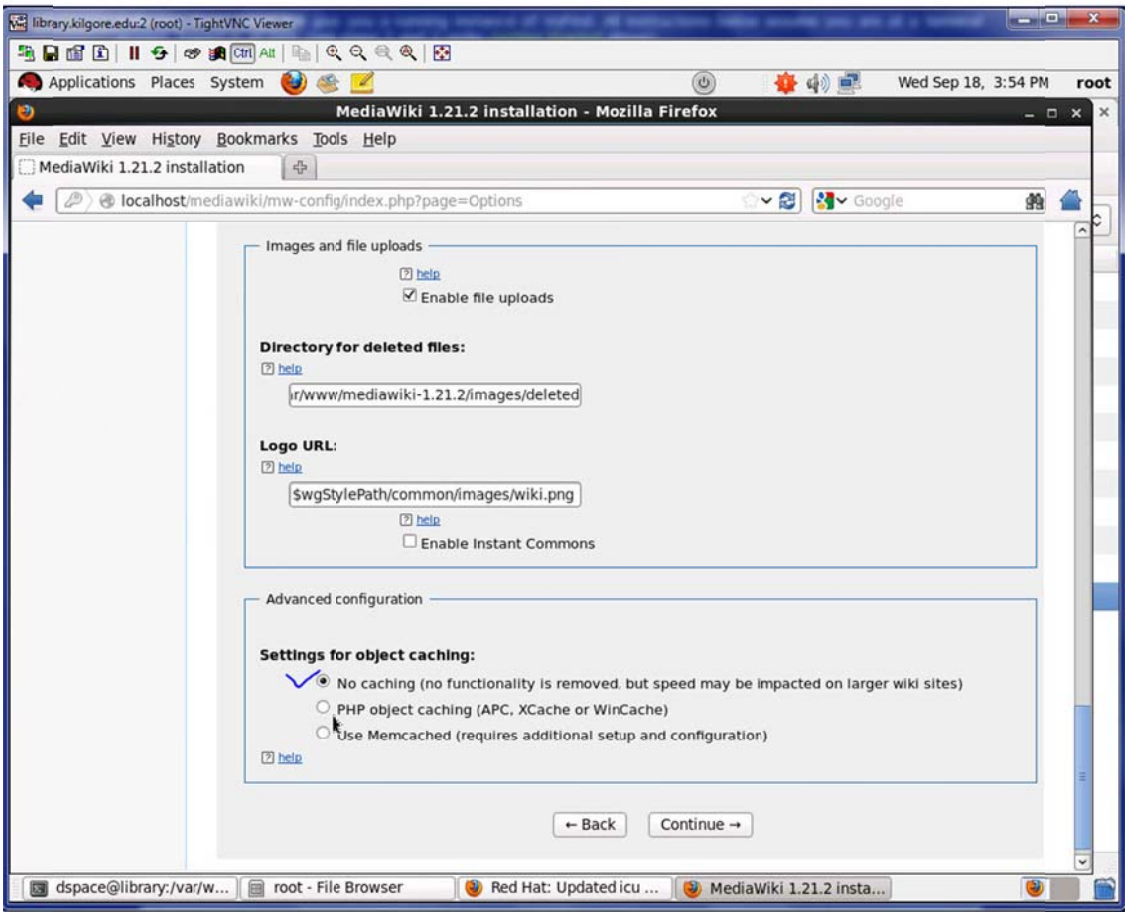

Set up the email contact

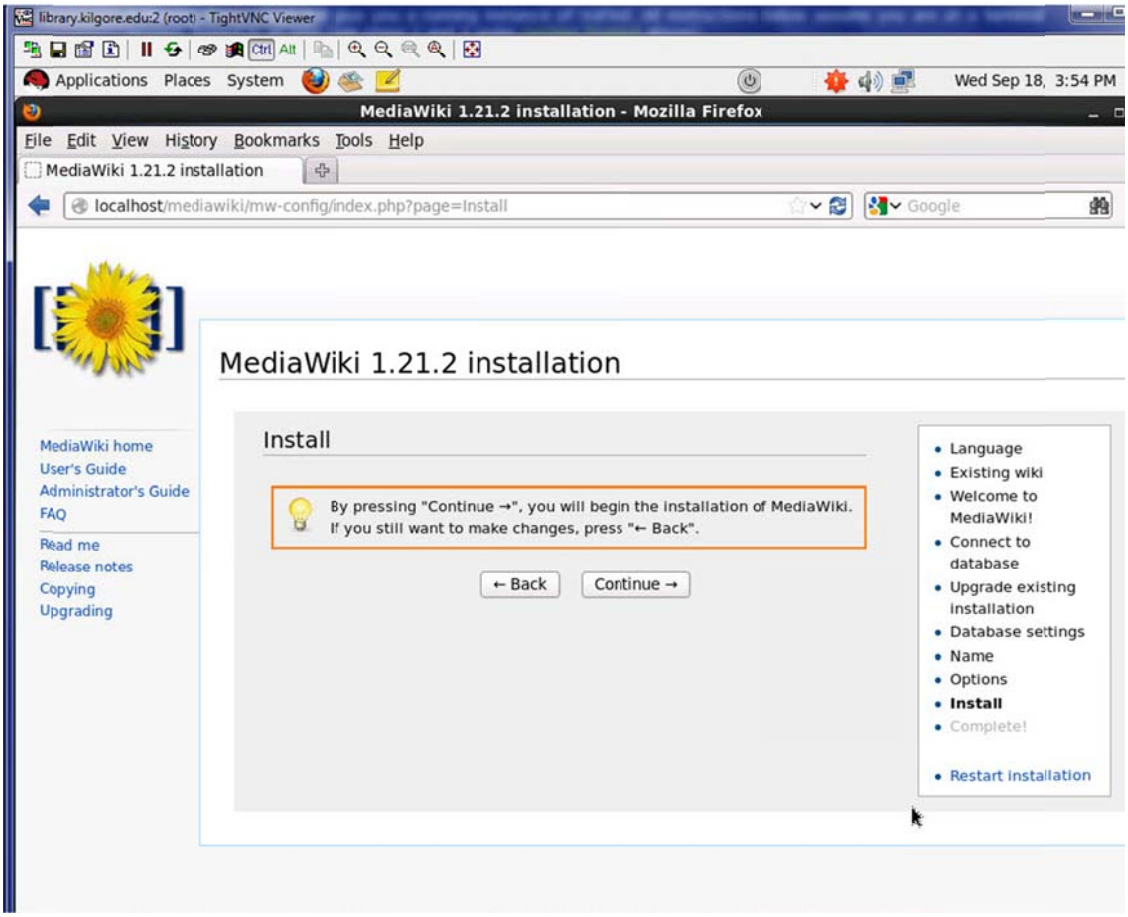

Select all extensions for MediaWiki

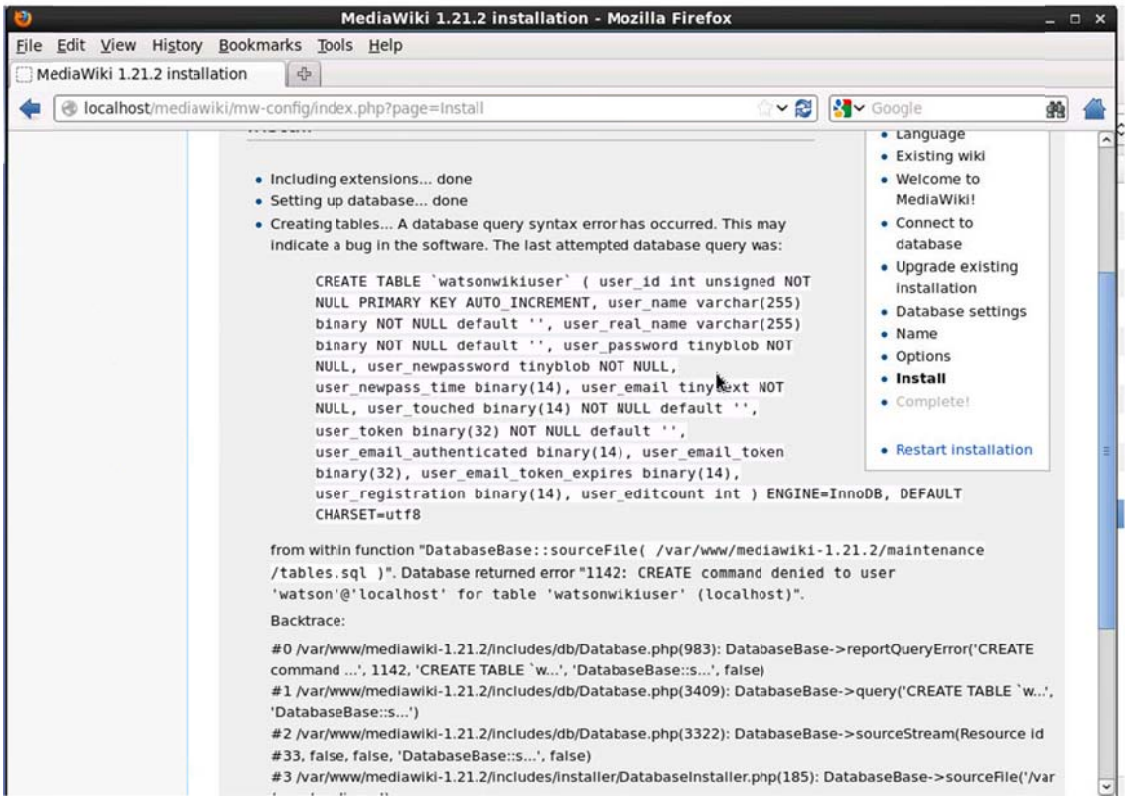

Setup directory for deleted files and logo URL

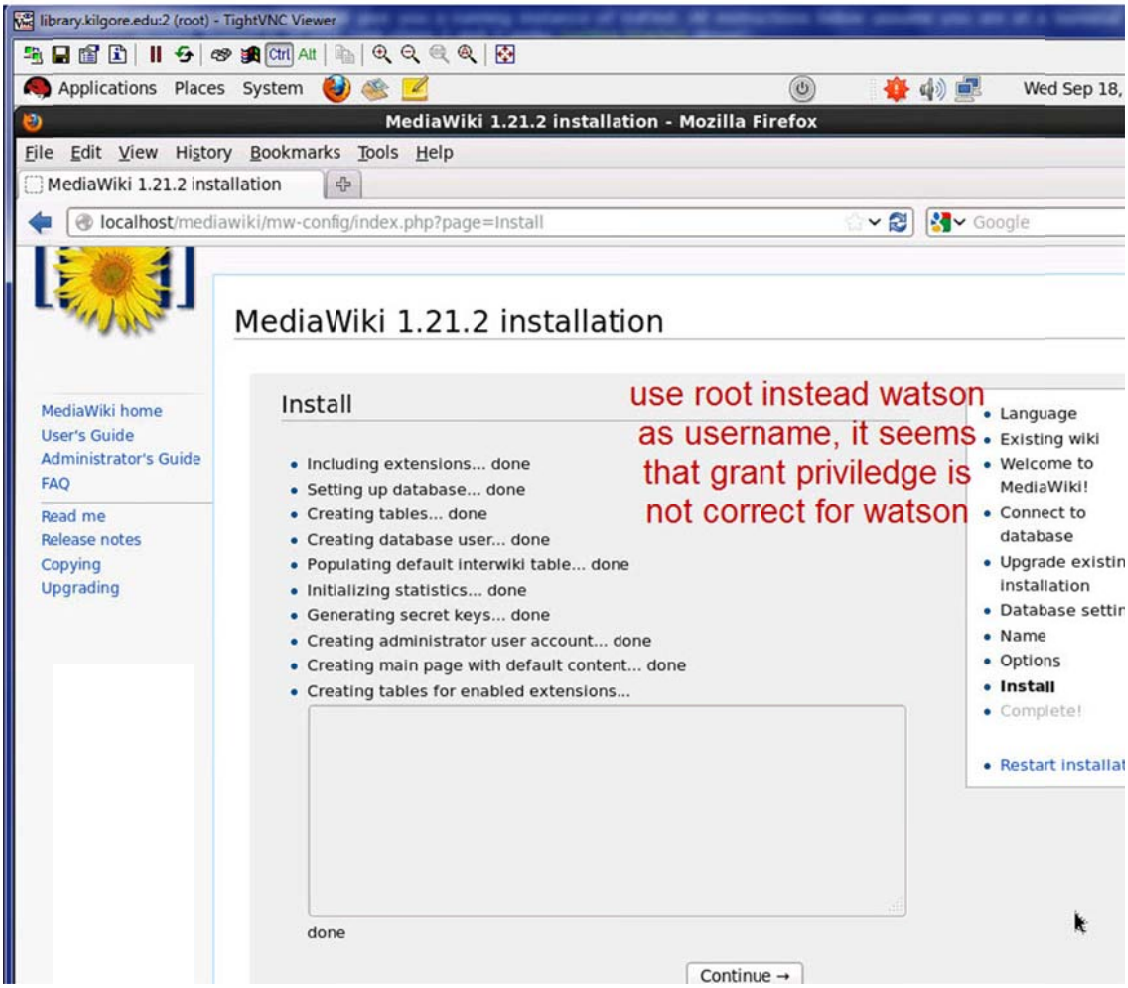

Click continue and install

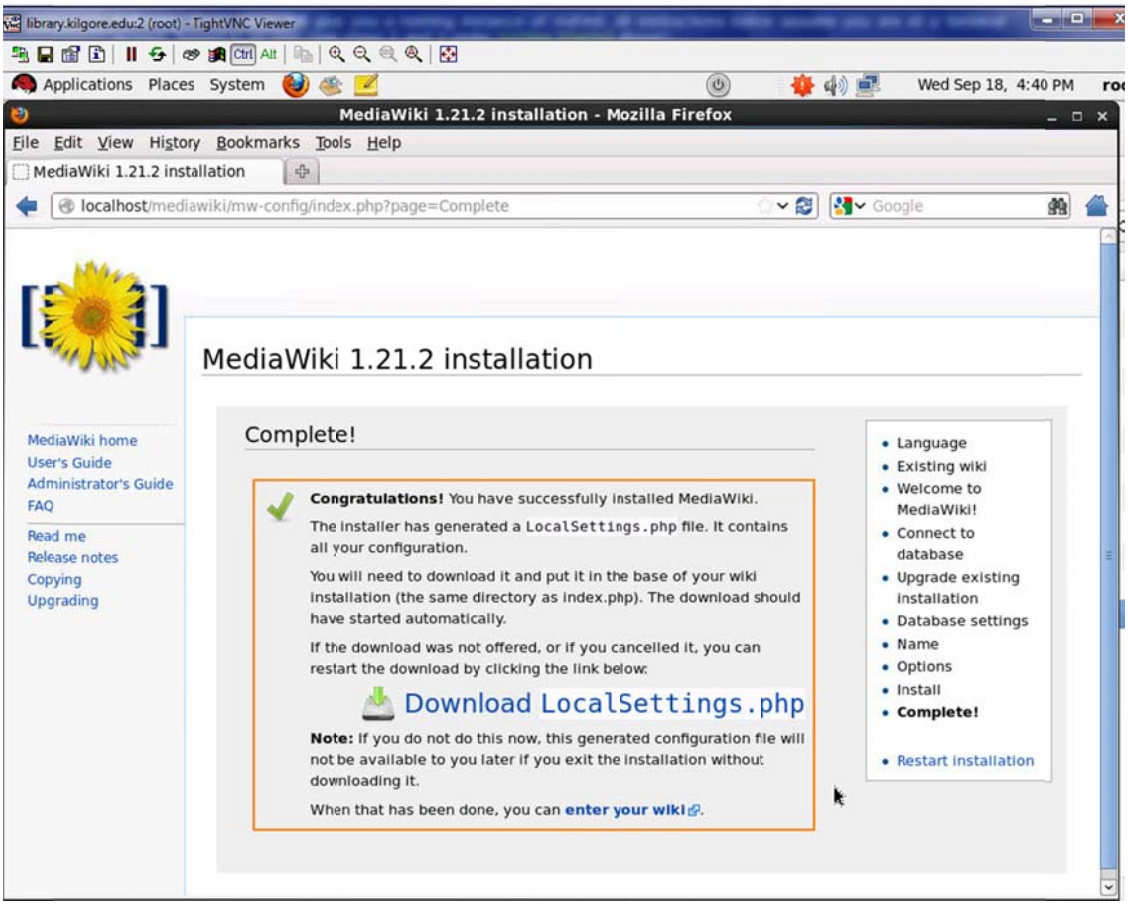

It is failed to create table watsonwikiuser. What is going on? Don't panic!

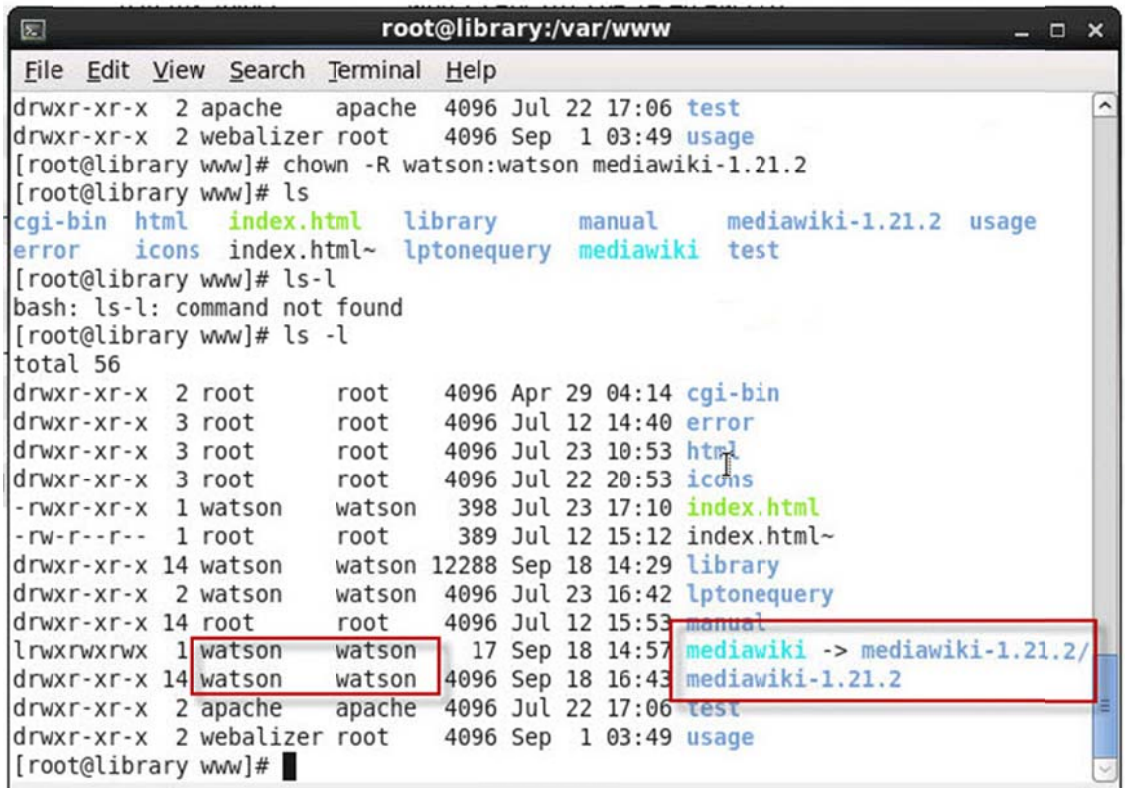

The problem is solved.

Installation is successful

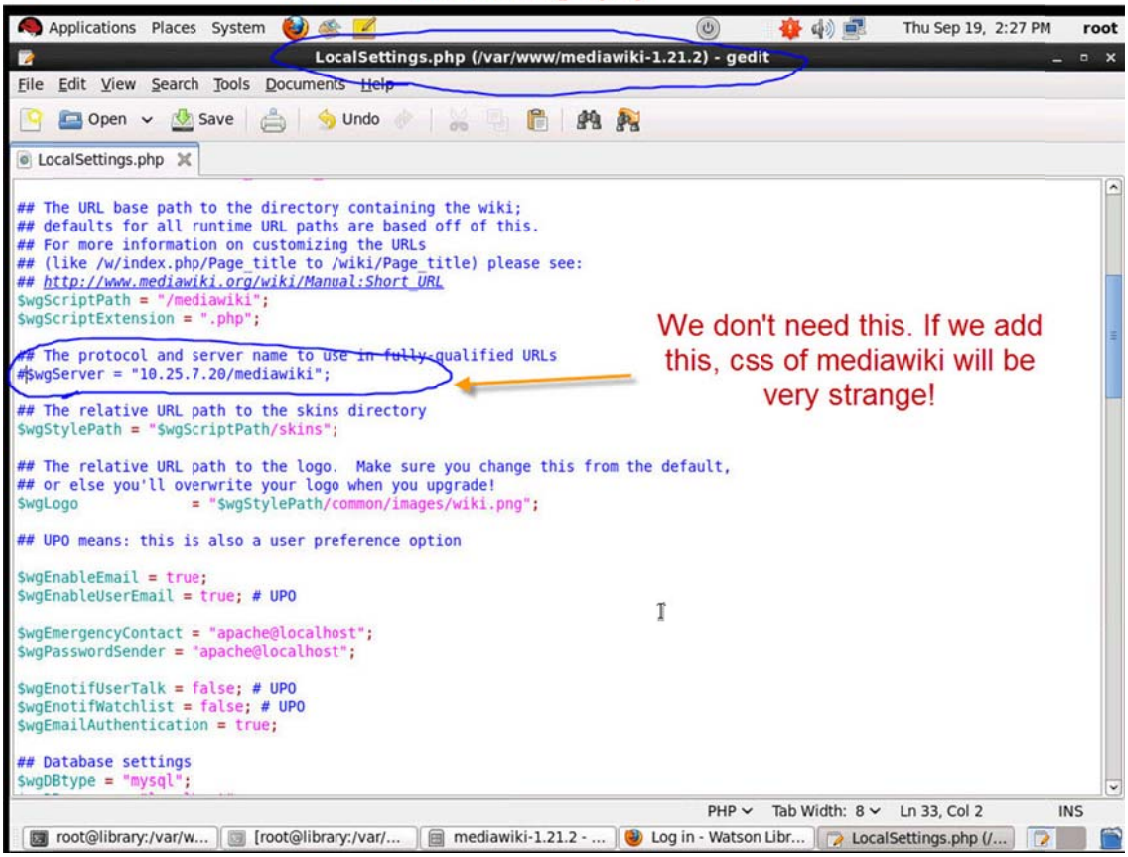

Give the user watson the priviledge to access mediawiki folder

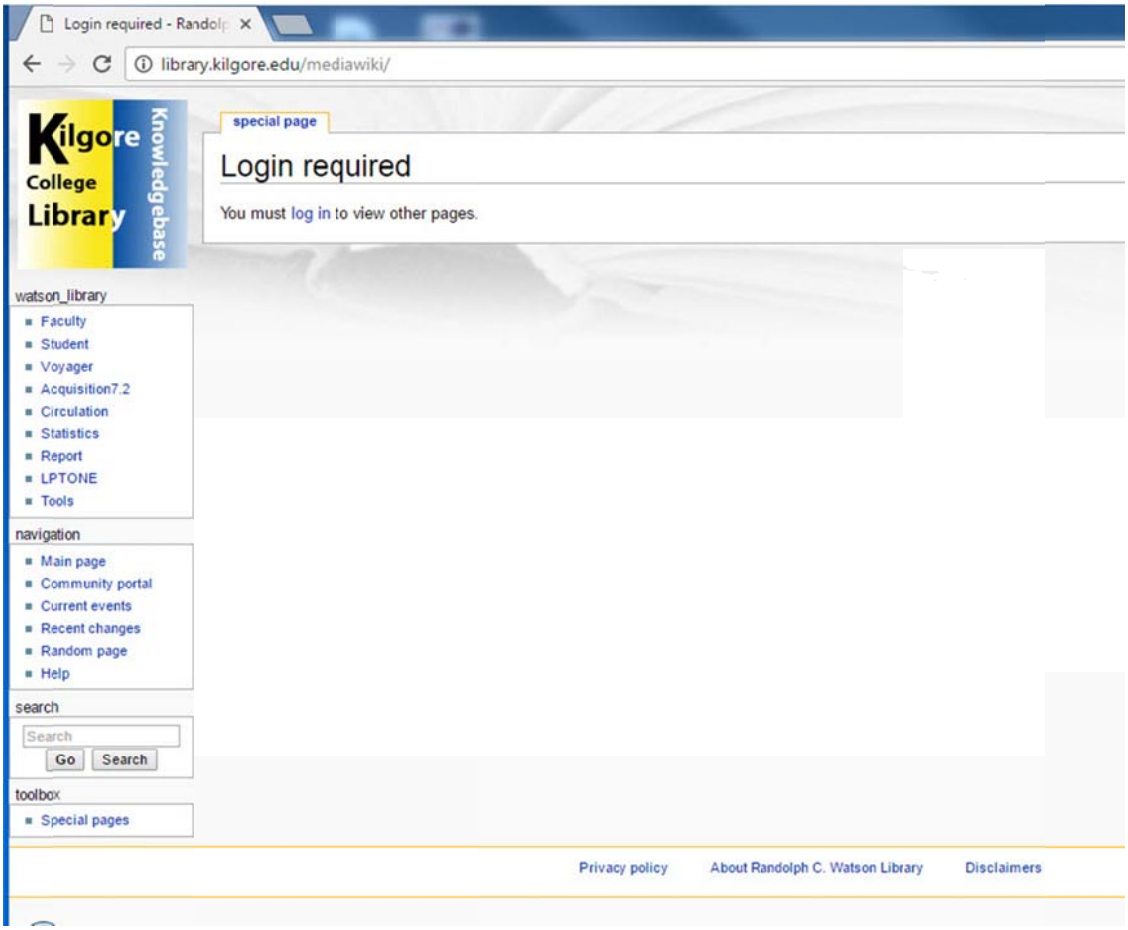

It seems that css is not effective in this webpage. I changed the value of variable $wgServer from localhost to library.kilgore.edu.

Change $wgServer variable value in the file LocalSettings.php

It is done!
