Linking Items to Additional Bibliographic Records

To link item records to additional bibliographic records, you must be authorized for function 126 (Link additional bib records). See Authorized Functions for more information.

Use the following steps to link an item record to an additional bibliographic record.

NOTE

When linking a new record to a bibliographic record, you must save the item record before linking.

1. Retrieve a bibliographic record.
2. In the Summary tab of the retrieved record, select the item record(s) you want to link to an additional bib.
3. Choose Edit | Link to additional bib record | Find Bib.
4. In the Select destination bib window, retrieve the bibliographic record to which you want to link the item(s).
5. In the Summary tab of the bib record to add, choose Use Bib. The Select destination bib window closes, and the system links the item(s) to the additional bibliographic record you selected.

   If an item is attached to more than one bibliographic record, the additional bibliographic record number(s) appear immediately beneath the variable-length field area of the item Record tab in a status bar labelled Also linked to record(s):.

6. You can remove links to additional bibliographic records appearing in the status bar by right-clicking a bib record number and then choosing Remove link to bibliographic record.
7. You can edit an attached bibliographic record by viewing the item in the Record tab and then choosing Edit in the toolbar.
