ABOUT AUTHORS

The Collection of articles on the energy industry was created in 1975, aiming at promote the development of energy industry, and improve the communication among professionals in energy area.

Some specialists and professional make big contribution for the collections development. Many of them have great experience, either working for state energy bureau, or making research on famous institute.

ABOUT THE INDEX

The collection of articles on energy industry focuses on information distributed in periodicals, papers, forums, and reports coming from energy research institutions.

Many energy areas, such energy reserves, energy policies, development, energy safety, energy risk, energy technique, are highlight of our collection and research.

Any documents can be found by subject browsing way through alphabetical order (A-Z), or by typing keywords or search terms on search box above.

Personal Author:	McKillop, Andrew; Newman, Shelia.
Title:	**The final energy crisis** / edited by Andrew McKillop with Shelia Newman.
Source:	Energy books
Publication Year:	2005
Subject(s):	Energy policy; Energy crisis
Abstract:	The international range of contributors to this book provides a truly global perspective on the dangers inherent in our over-consumption of oil, gas and coal. They explore detailed evidence of the imminent acceleration of fossil fuel depletion and the limits of 'sustainability'. They outline the political background to the situation, not just among the world's largest consumers of fossil fuel, the US and China, but also in Europe and the developing world. Considering our future economic survival, they include a detailed examination of France and Australia. Finally, they explore the extreme costs of alternative such as nuclear power, and outline other possible lifestyles and methods.
