# Administering Workflows

The **Workflows** function specifies which Sierra functions are available to a user.

## Editing Workflows

To edit workflows, follow these steps:

1. Choose **Authorizations and Authentication Admin** from the **Admin App** menu.
2. Choose **Users**.
3. Click the **+** to the left of a listed user to expose the **EDIT** button.
4. Click the **EDIT** button.
5. Choose **Workflows**.
6. The system presents two parallel lists, one showing workflows that the user has been assigned and the other showing workflows that the user has not been assigned.
    - To add a function, use the mouse to drag the function from the **Available Workflows** list to the **Assigned Workflows** list.
    - To remove a function, use the mouse to drag the function from the **Assigned Workflows** list to the **Available Workflows** list.

      You can view a subset of the workflows on either list by typing a pattern of three or more characters into the **Filter list by typing here** box.
7. Click the **SAVE** button.

**Importing User Parameters**

You can copy the parameters of an existing user with the **Import Settings** function.

1. Choose **Import Settings**
2. Select the user whose parameters you want to import.
3. Select the parameters you want to import.
4. Click **IMPORT SETTINGS**
