Creating Bibliographic Records

To create bibliographic records in **Catalog**, you must be assigned permission 102 (Create bibliographic records). See Permissions Used by Sierra for more information.

To create a bibliographic record:

1. Choose **Catalog**, **Serials Checkin**, **Place Orders**, or **Receive** from the **Function** list.
2. Choose the **File | New Record | Bibliographic Record** menu option.
3. Follow the steps described in Entering Data into New Records.
4. If you have chosen in the **Admin | Settings | New Records** tab to automatically attach records, Sierra prompts you to enter values for the fields in the item, order, or checkin records to be created and attached. If you use automatic record attachment, choose **Save All** from the bibliographic record's **Summary** tab when you have created all of the attached records.
