Adding Messages at Checkout

To choose the **Add Message** button, you must be assigned permission 310 (Add Message at Checkout). See Permissions Used by Sierra for more information.

If the **Add message at checkout** Setup option is enabled for your login, you can add a **MESSAGE** variable-length field to an item after checkout by using the **Add Message** button. This function is typically used by staff who notice a problem with an item after they perform a checkout.

Follow these steps to add a message to a checked out item.

1. In the **Check Out** tab, select the item record to which you want to add a message. (If you select multiple items, the system disables the **Add Message** button.)
2. Choose the **Add Message** button. The Add Message to Item dialog displays.
3. Enter the text of the message (up to 250 characters).
4. To add the message to the item record, choose **OK**. To continue without adding the message, choose **Cancel**.

Displaying Item Messages

The system inserts the new **MESSAGE** field above any **MESSAGE** fields that already exist in the item record. When the item is subsequently checked in or checked out, the system displays the new message.
