Sending Prepared Notices to Patrons

> To use the **Notices** function, you must be assigned permission to generate at least one type of circulation notice. To generate notices for all locations, you must be assigned permission 363 (Send notices for All locations). To create, edit, or prepare auto notice jobs, you must be assigned permission 366 (Auto Notices). For more information, see Permissions Used by Sierra.

Perform the following steps to manually send prepared notices to patrons via email, Teleforms, or the printer.

1. Create the notices job. After you select the parameters for the notices job and prepare the notices job, you can send the prepared notices to patrons from the prepared notices pane.
2. Choose the notices to send to patrons (emailed notices, Teleforms notices, or printed notices). To do so:
    a. Select a delivery method from the **Notice Method** drop-down list (e.g., **38 to E-mail**) in the **Notices** tab.
    b. If you want to send the notices listed in the **Email** or **Teleforms** queue to the printer—instead of sending the notices by the specified delivery method—select the desired queue and choose the **Move to Print Queue** button.

> **Patrons Not Charged for Involuntary Notice Printing**
>
> Even if your system is configured to charge patrons for printing overdue notices, the system does not charge patrons if you move overdue notices from the **Email** or **Teleforms** queue to the **Print** queue.

    c. Ensure the system is displaying the notice queue from which you want to send notices. For example, if you chose the email notice delivery method and then moved all email notices to the printing queue, you must select a different queue (i.e., Teleforms or print) before continuing.
3. Choose the **Send Notices** button.
4. (Optional) Enter the number of the notice at which the system should begin the sending process. In most cases, you should start sending from the first notice, but if the sending process is interrupted for any reason, the option to send out only a portion of the selected notices enables you to continue the process at the first unsent notice.
5. Choose **OK**. The system displays a progress bar as it prepares and sends the notices (to cancel this process, choose the **Cancel** button), then prompts you to clear the notices:

    32 notices printed.
    Clear all email notices?

6. Choose whether to clear the sent notices:
    - To continue without clearing the sent notices, choose **No**. The system displays the sent notices again the next time you prepare a notices job with the same notice type and parameters.
    - To permanently clear the notices that were successfully sent, choose **Yes**. Sierra does the following:
        - Removes all the notices that were successfully sent; i.e., the notices that are not listed

in the **Items Not Sent** tabs. The system displays these unsent notices the next time you generate notices for this notice type.

- If you sent overdue notices, the system updates the **OVERDUE** and **ODUE DATE** fields in the related item records to show which overdue notices were sent.
- If you sent overdue notices, and the system sent the highest overdue level notice (or a notice containing all overdue levels) for an item, a replacement bill is generated for the item.

> **Cleared Notices Are Permanently Cleared**
>
> After you clear sent notices, you can regenerate statements of charges, statements of checked out items, and title paging lists. All other sent notices are permanently cleared.
